

# Design Thinking *meets* Computational Thinking: *Kinetic Art and Embedded Systems*

Erik Brunvand  
School of Computing  
University of Utah  
Salt Lake City, UT USA

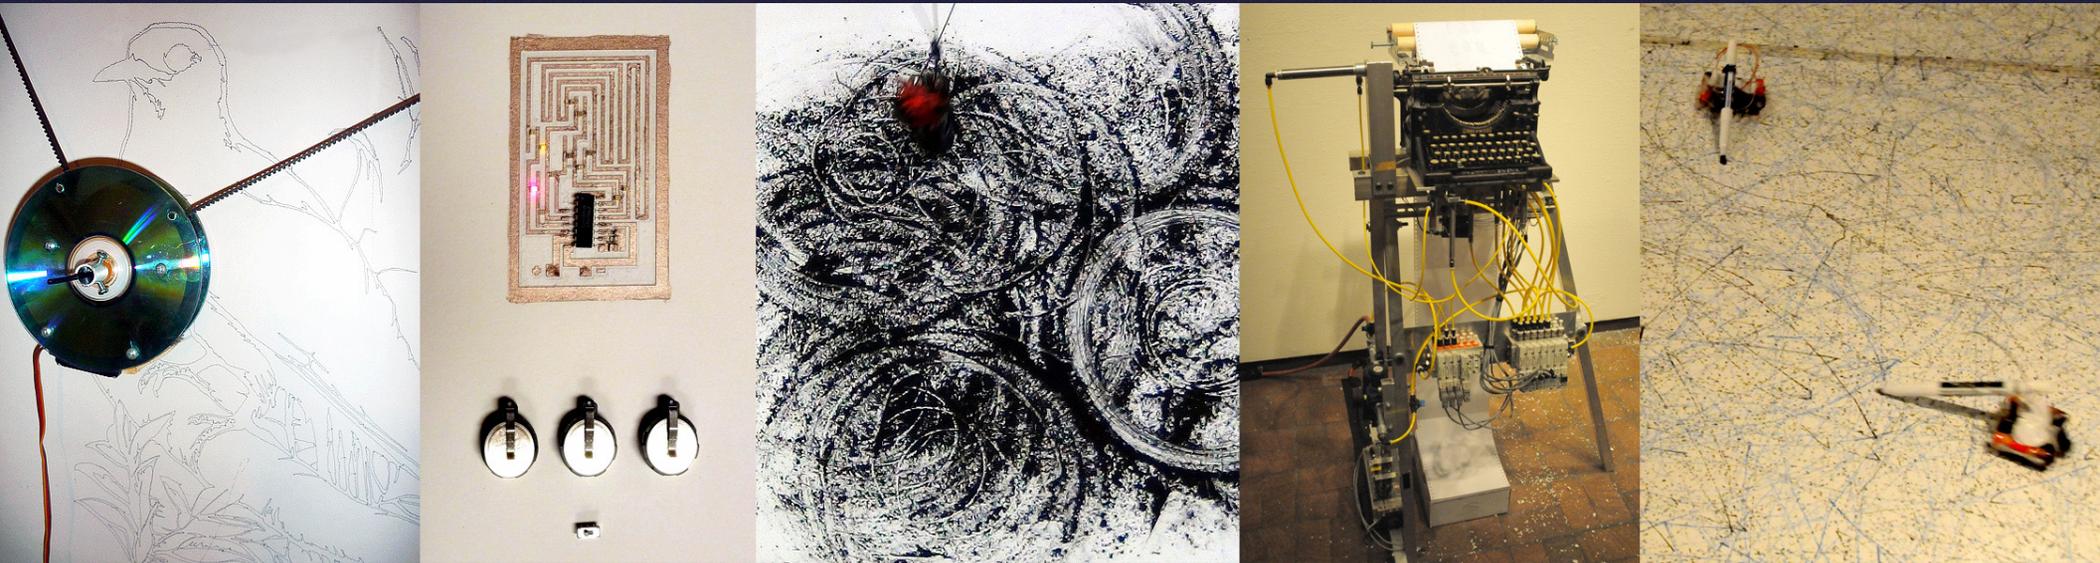

# Agenda

*I argue that arts/technology collaboration is a powerful framework for enhancing ideas in both arenas*

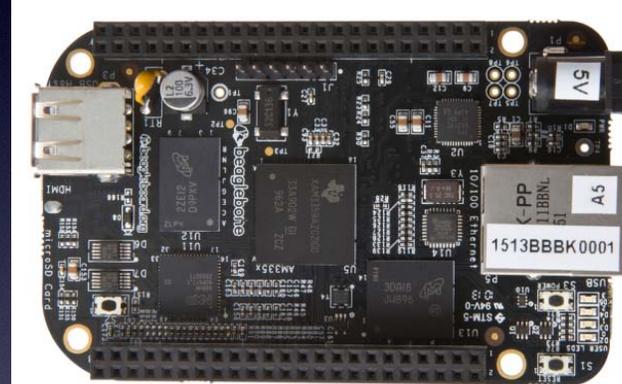

# Context

I frame this in the context of *kinetic art* and its connection to *embedded systems*

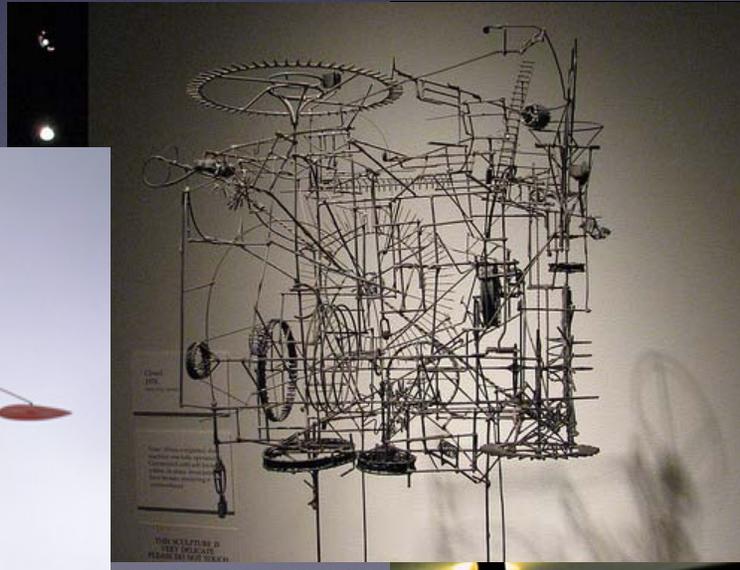

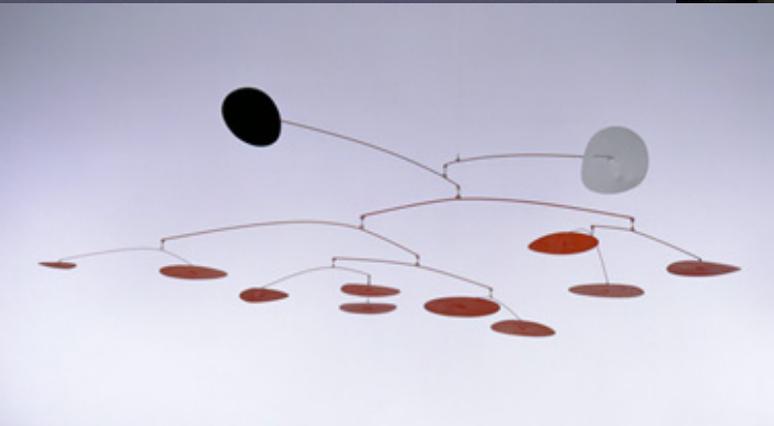

# Embedded Systems

- Computer systems that are embedded into a complete device
- Often small or special purpose computers or microprocessors
- Designed to perform one or a few dedicated functions
- Often reactive to environmental sensors
- Often designed to directly control output devices

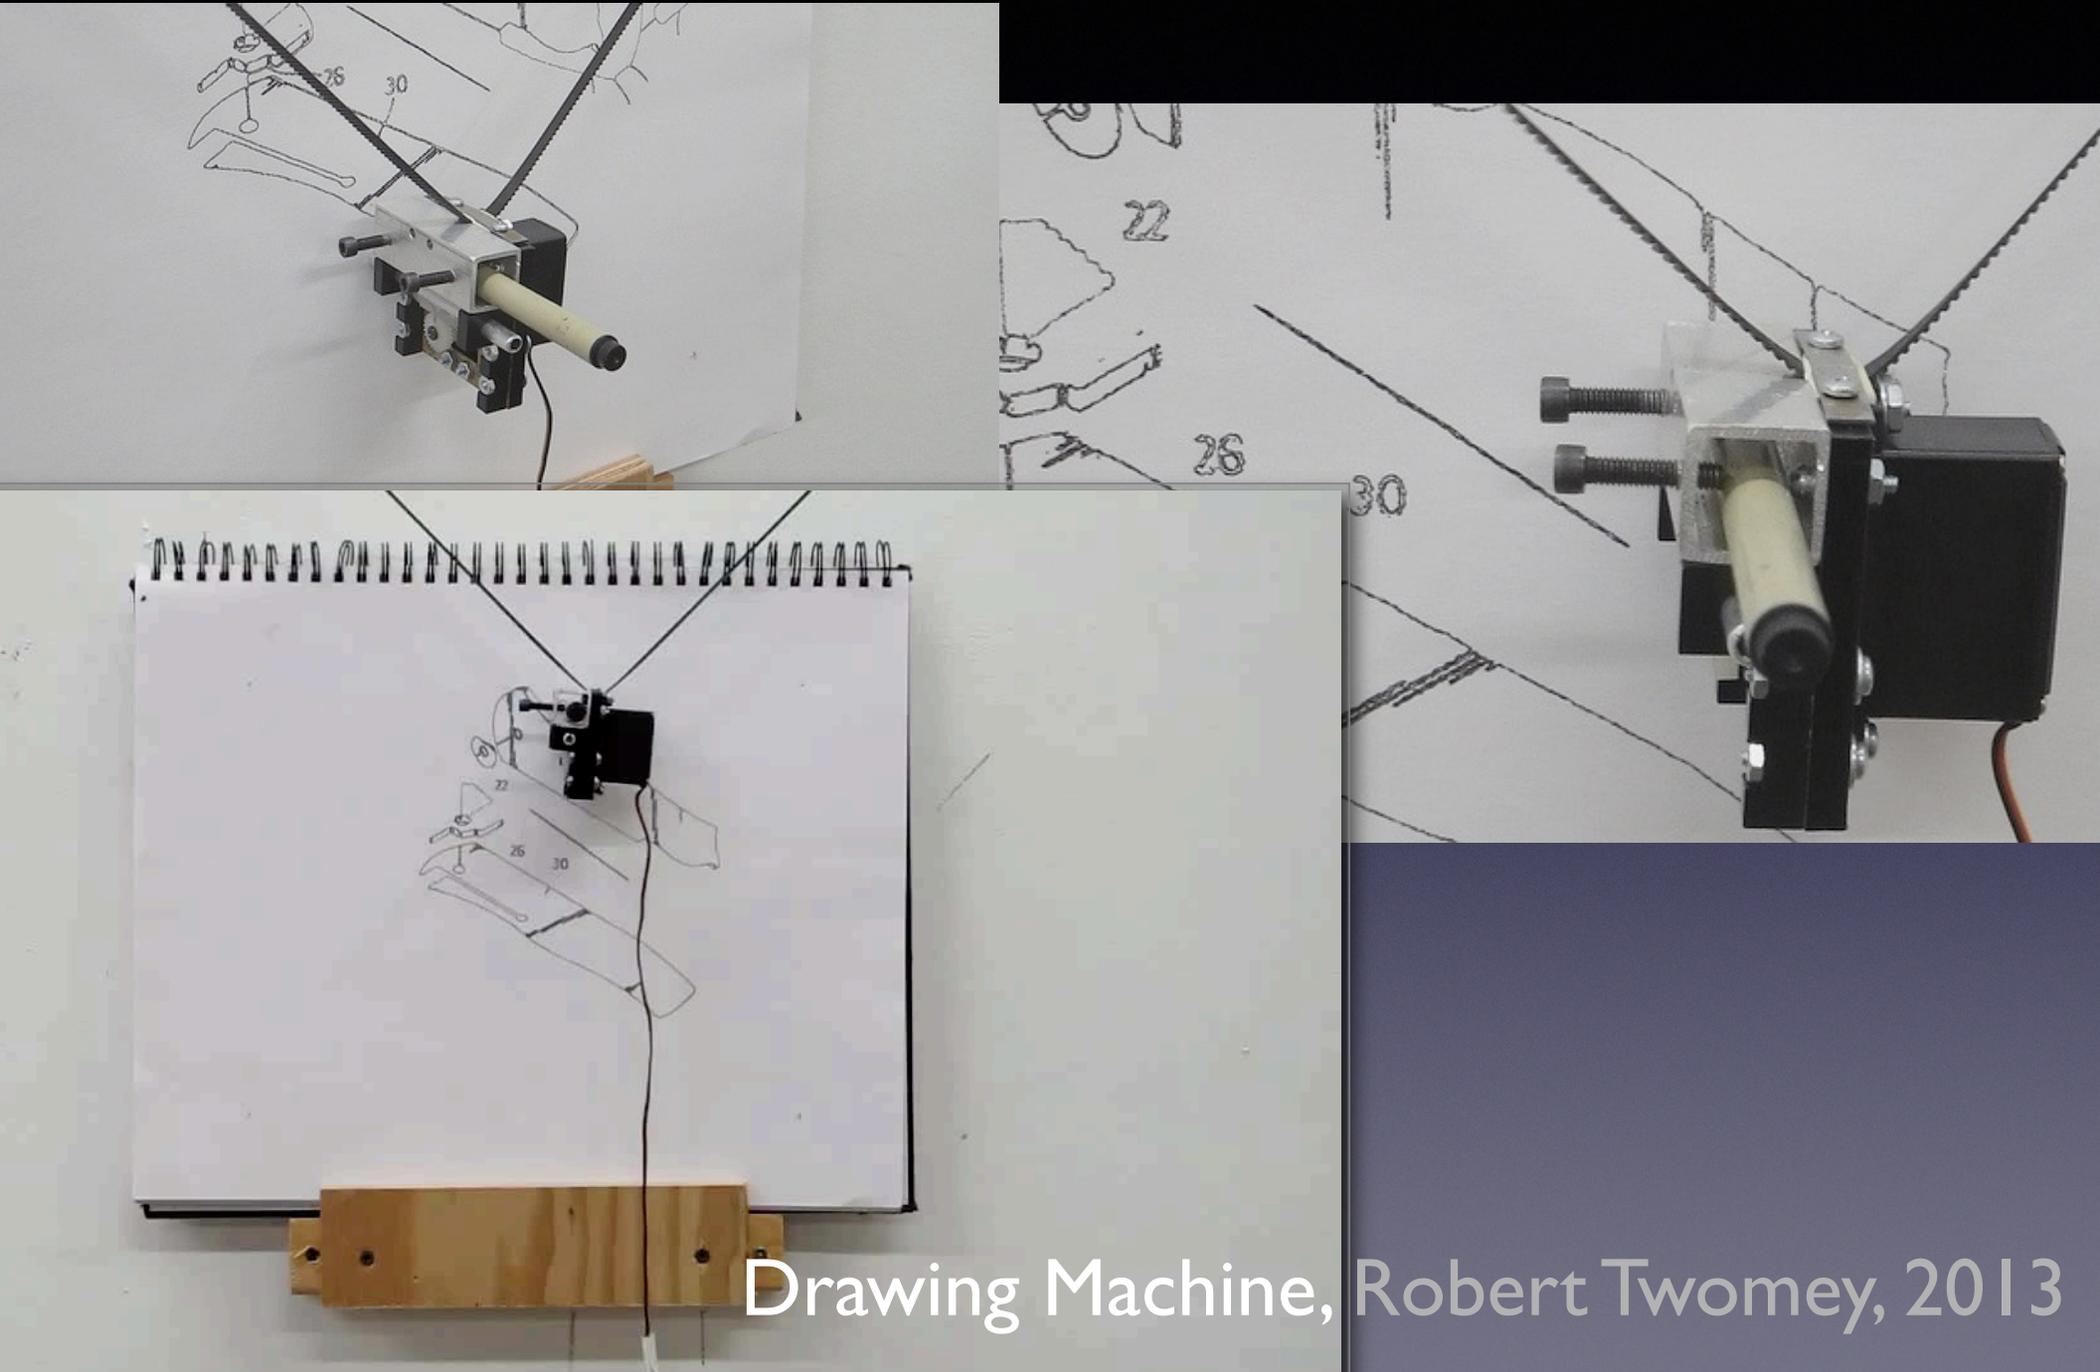

# Kinetic Art

- Contains moving parts
  - Depends on motion, sound, or light
- Often controlled by microcontrollers
  - Motors, actuators, transducers...
- Often reactive to environment

# SIGGRAPH Art Gallery

Drawing Machine, Robert Twomey, 2013

# CHI Interactivity

## Gravity of Light

3D Printed Wearable Project

YOUNGHUI KIM / YEJIN CHO

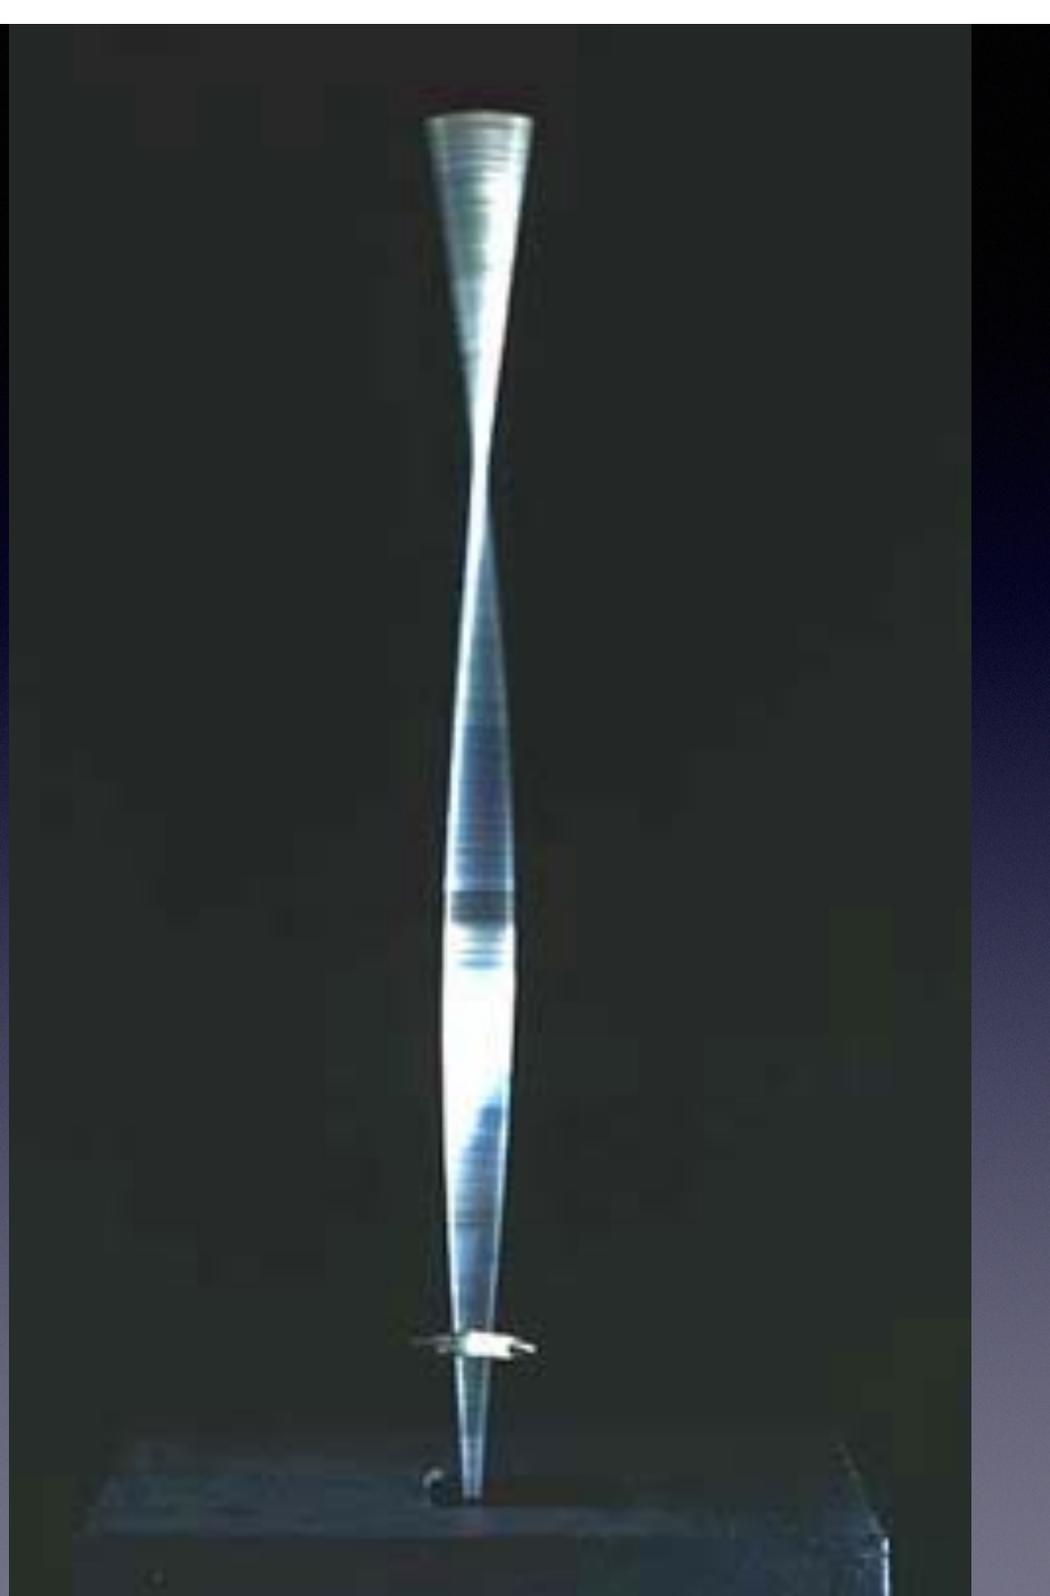

# Background

- Short survey of kinetic art
  - The avant garde in the 1920's
  - Small steps in the 1950's
  - The computer age
- Outline for a collaborative class
- Examples

# Naum Gabo

(1890-1977)

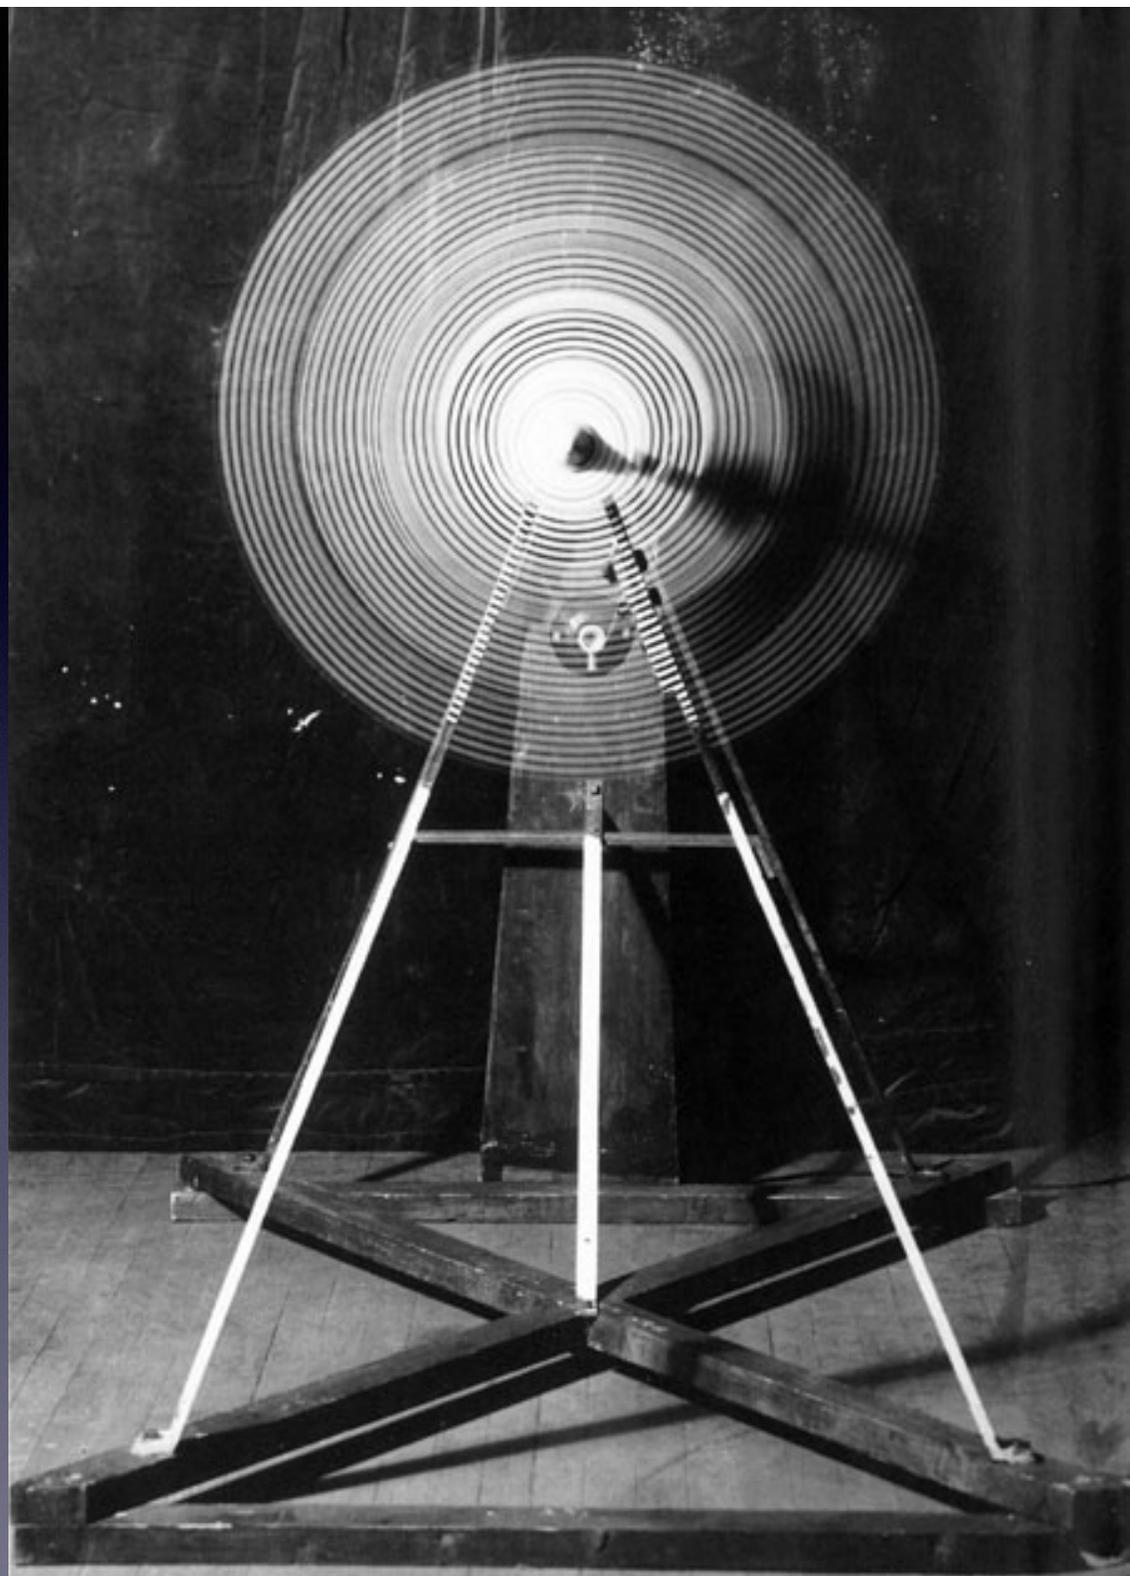

- Kinetic Construction  
(Standing Wave)  
1919-1920

# Marcel Duchamp

(1887 – 1968)

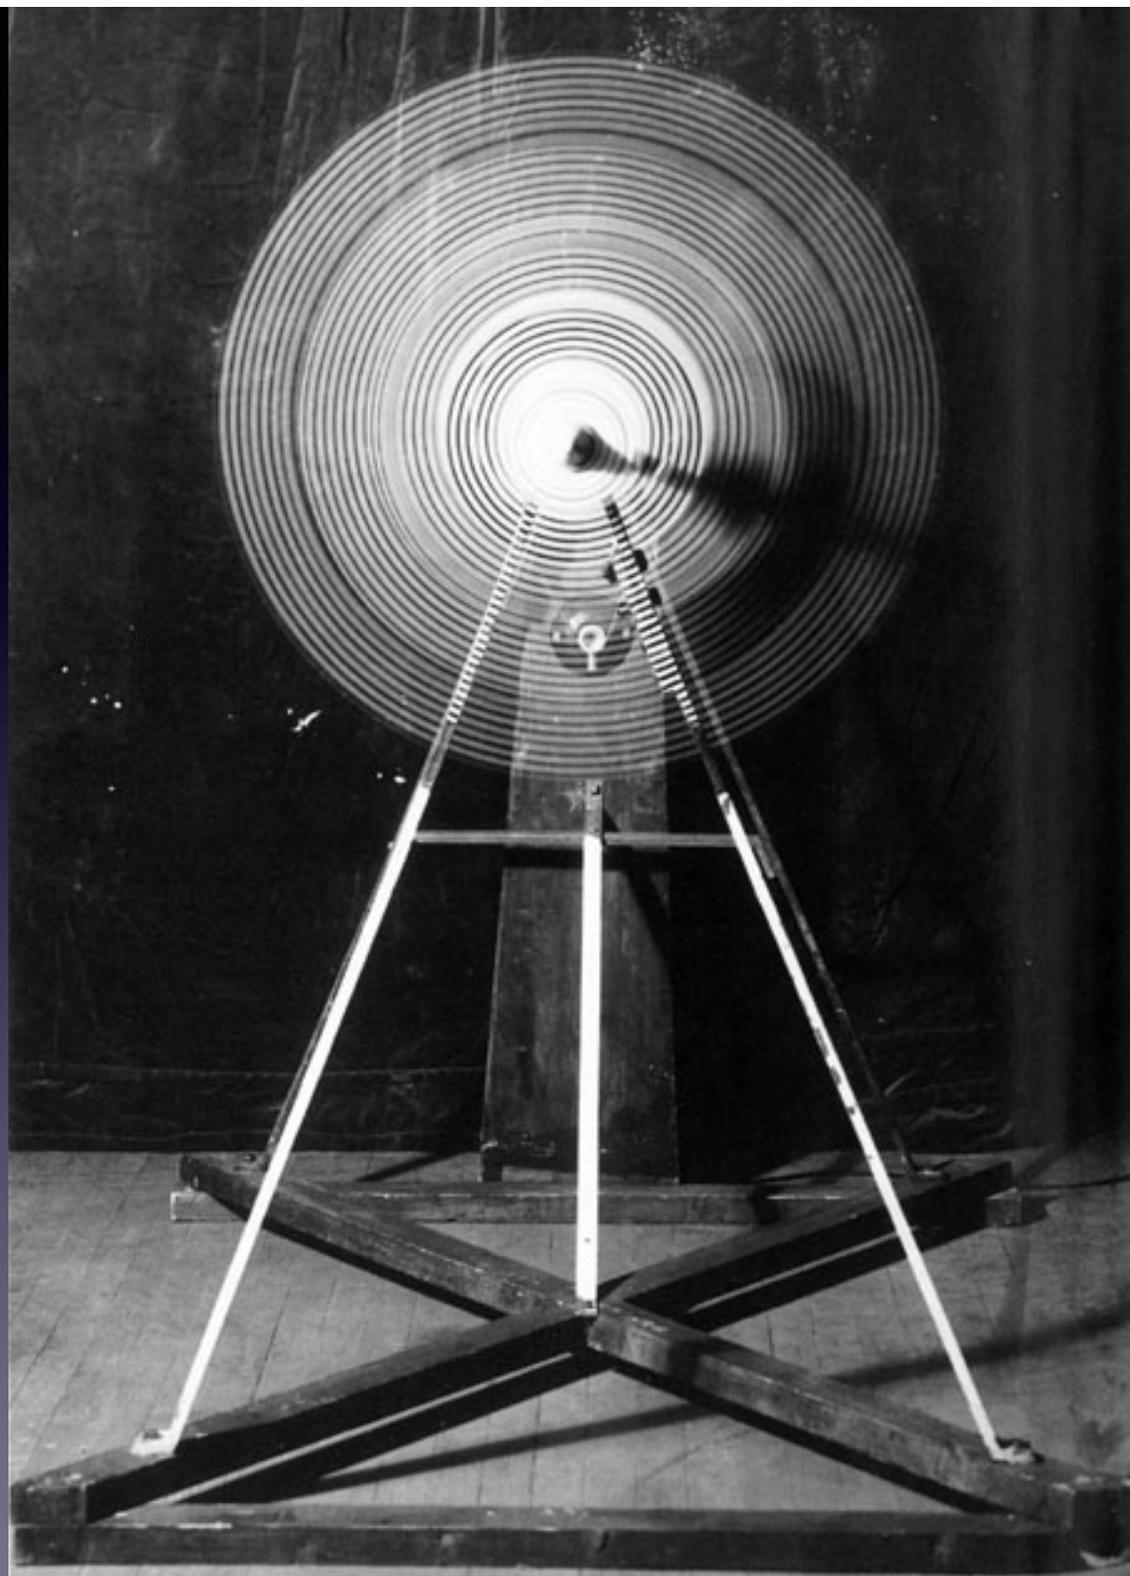

- Rotary Glass Plates  
(Precision Optics)  
1920
- Built with the help of  
Man Ray

# Marcel Duchamp

(1887 – 1968)

- Rotary Glass Plates  
(Precision Optics)  
1920
- Built with the help of  
Man Ray
- Rumored to have almost  
killed Man Ray...

# Marcel Duchamp

(1887 – 1968)

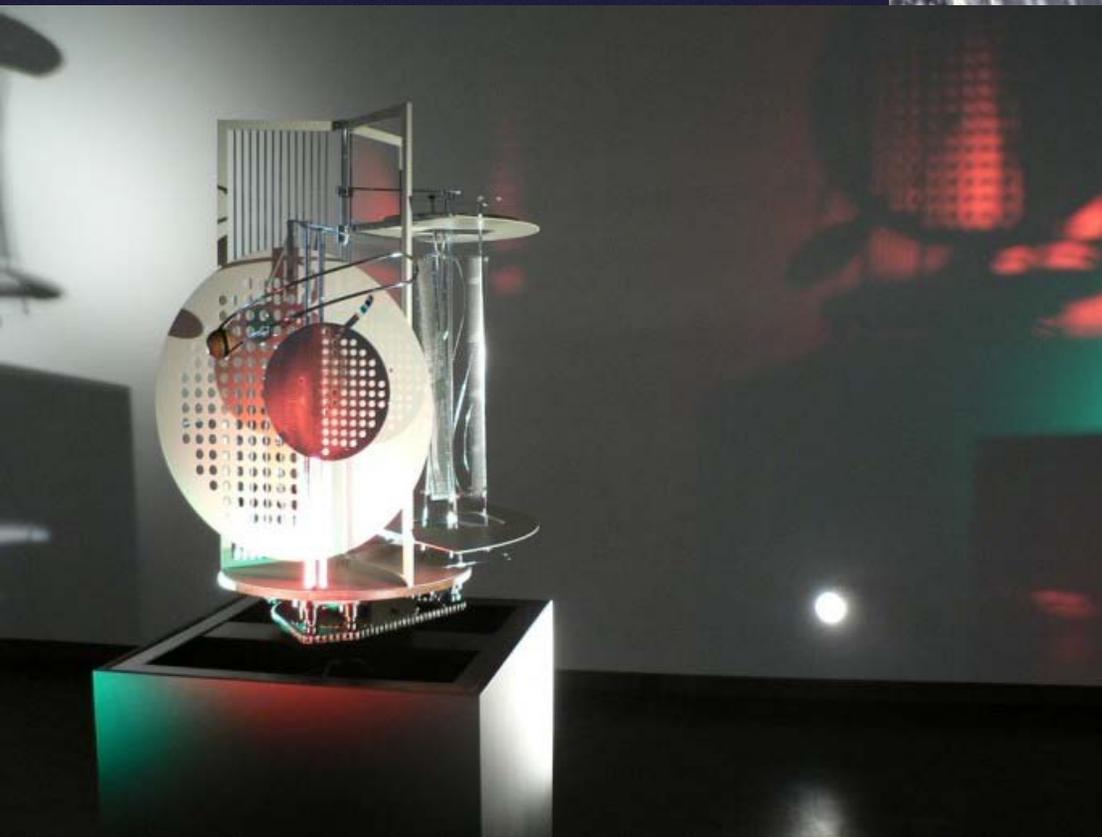

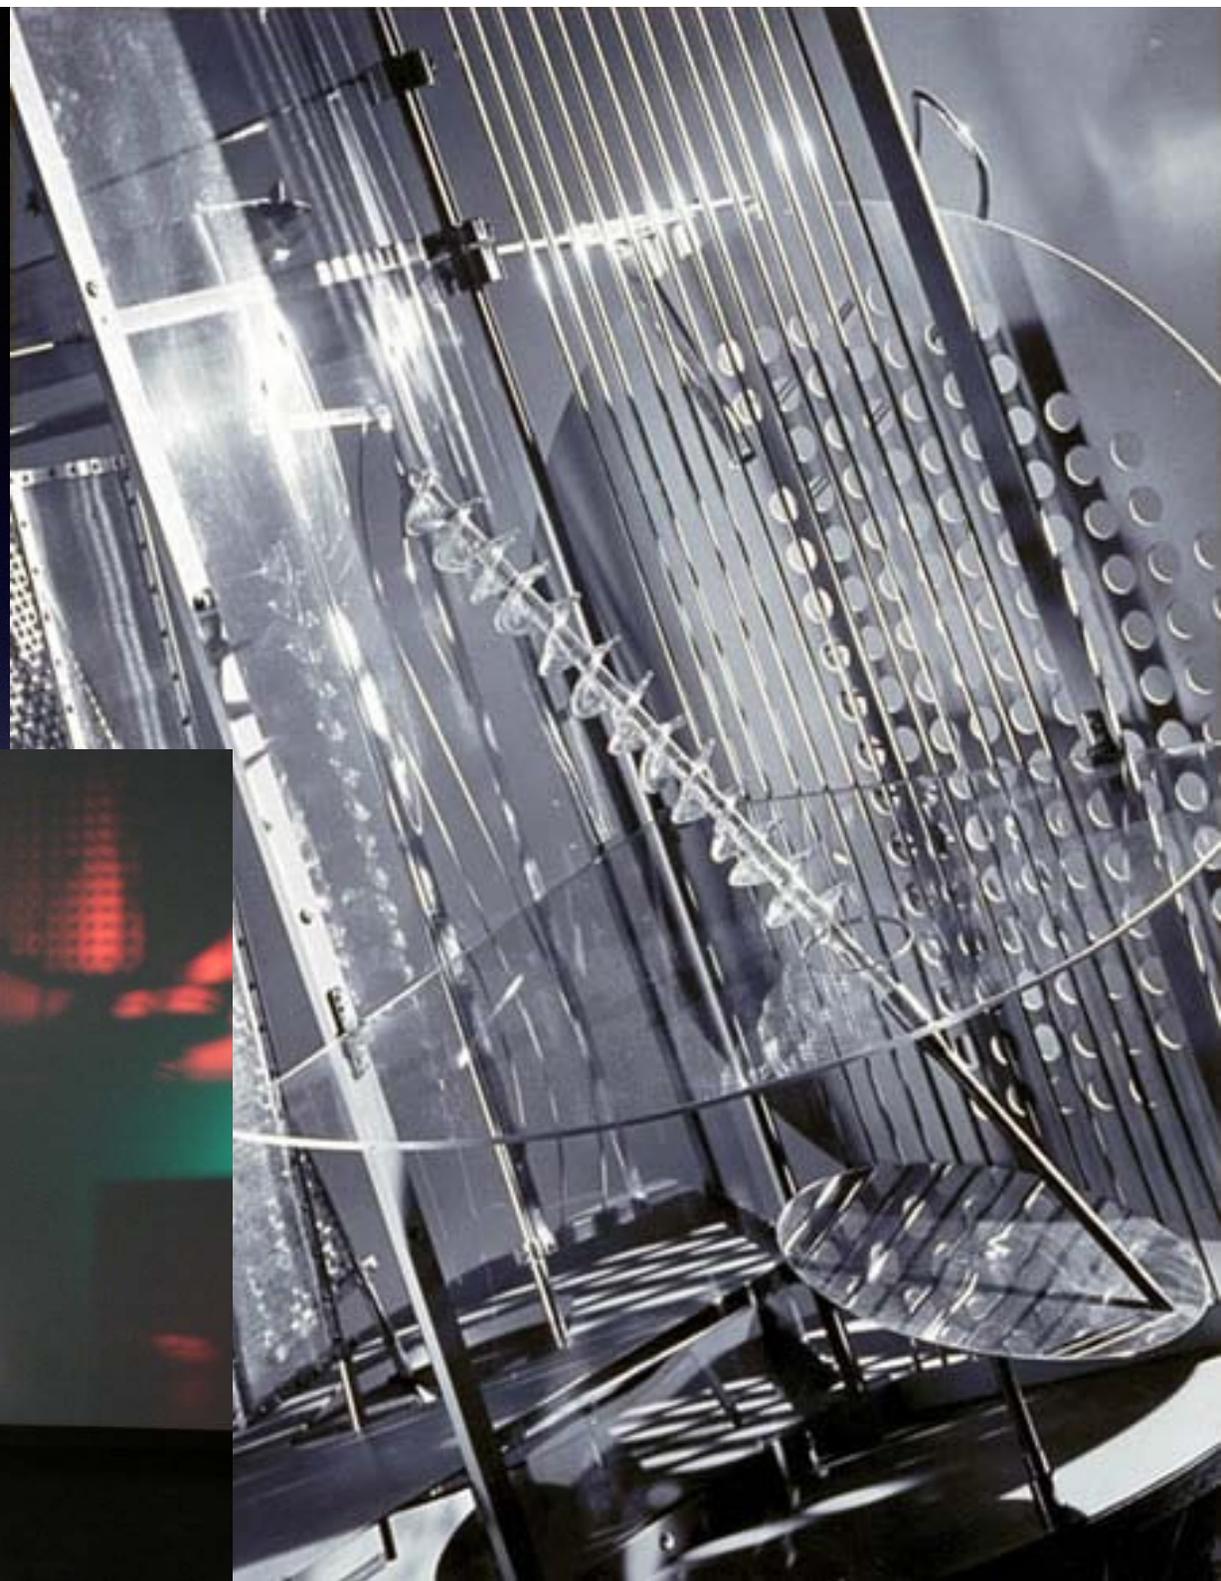

- Rotary Demisphere  
(Precision Optics)  
1925

# László Moholy-Nagy

(1895-1946)

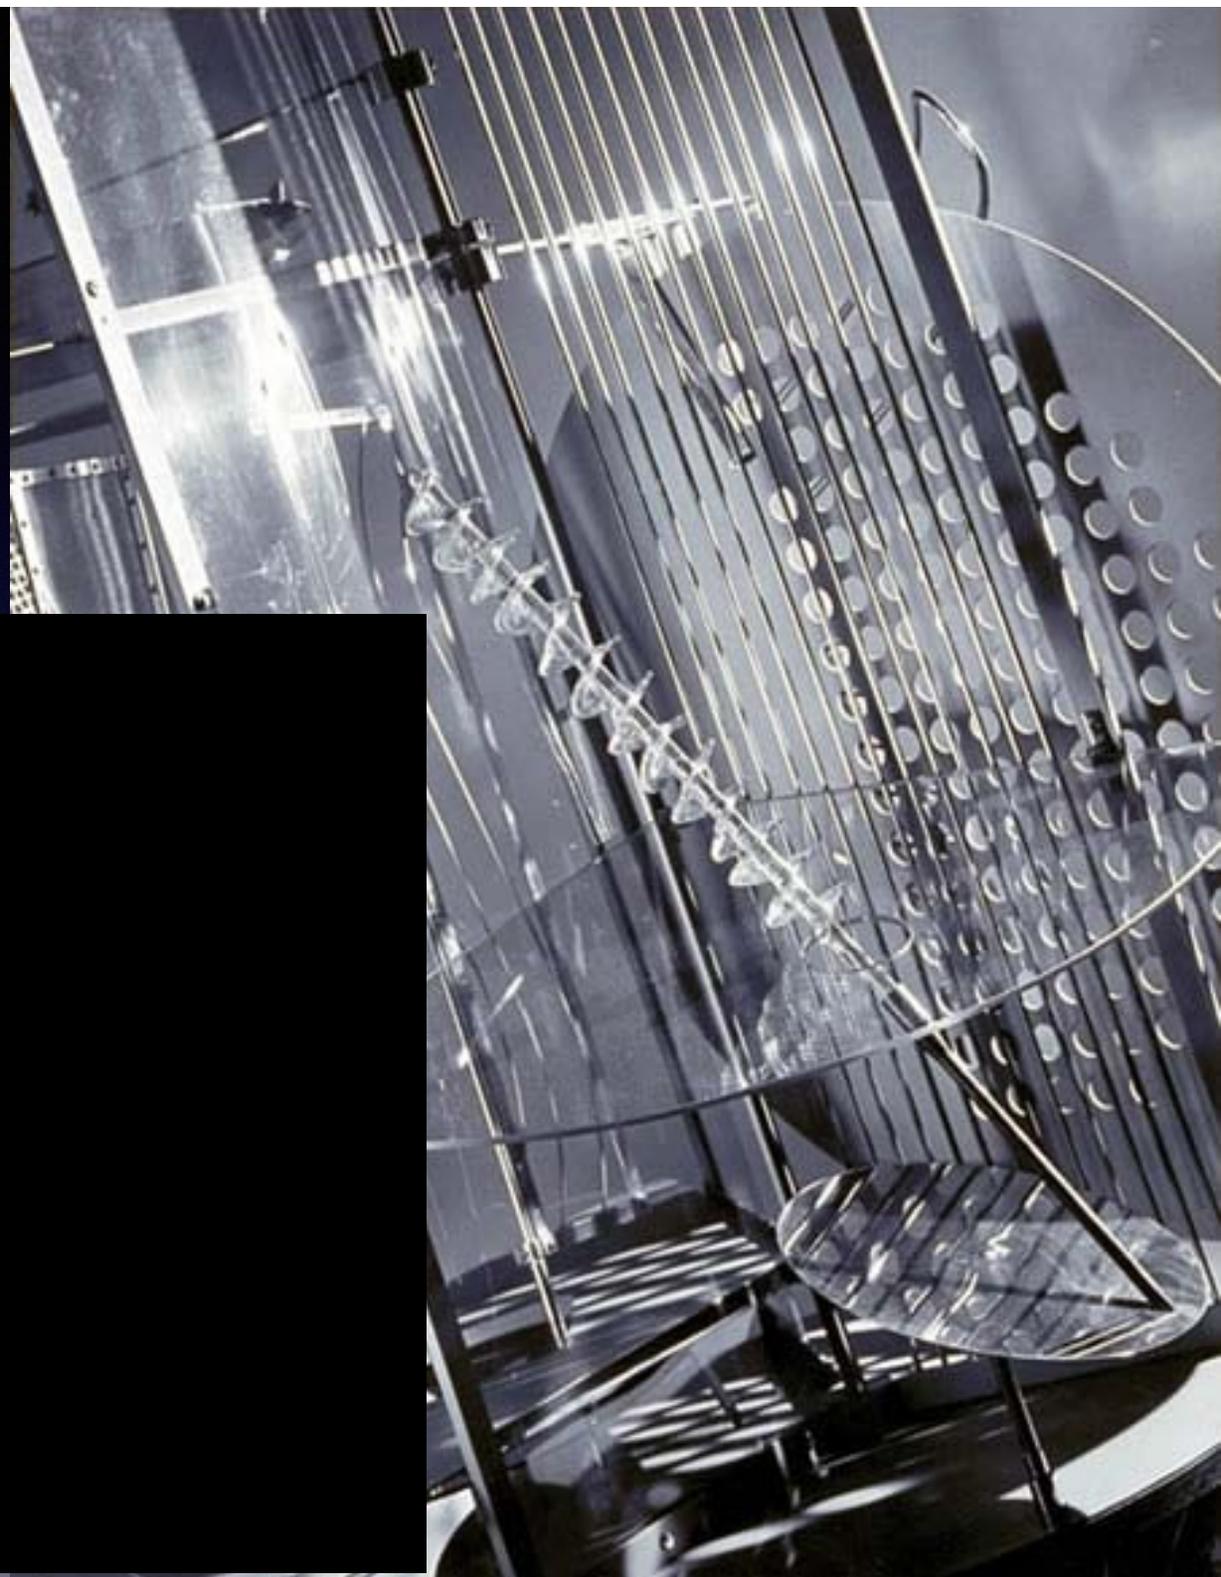

- Light-Space  
Modulator (1922-30)

# László Moholy-Nagy

(1895-1946)

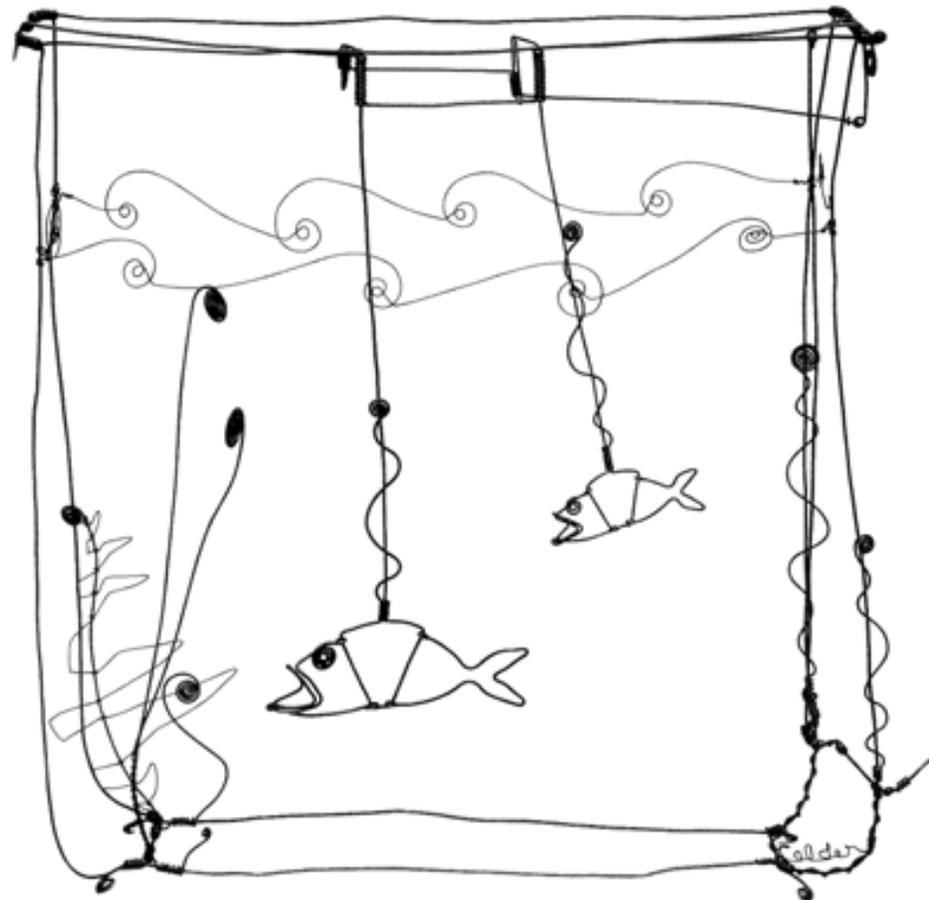

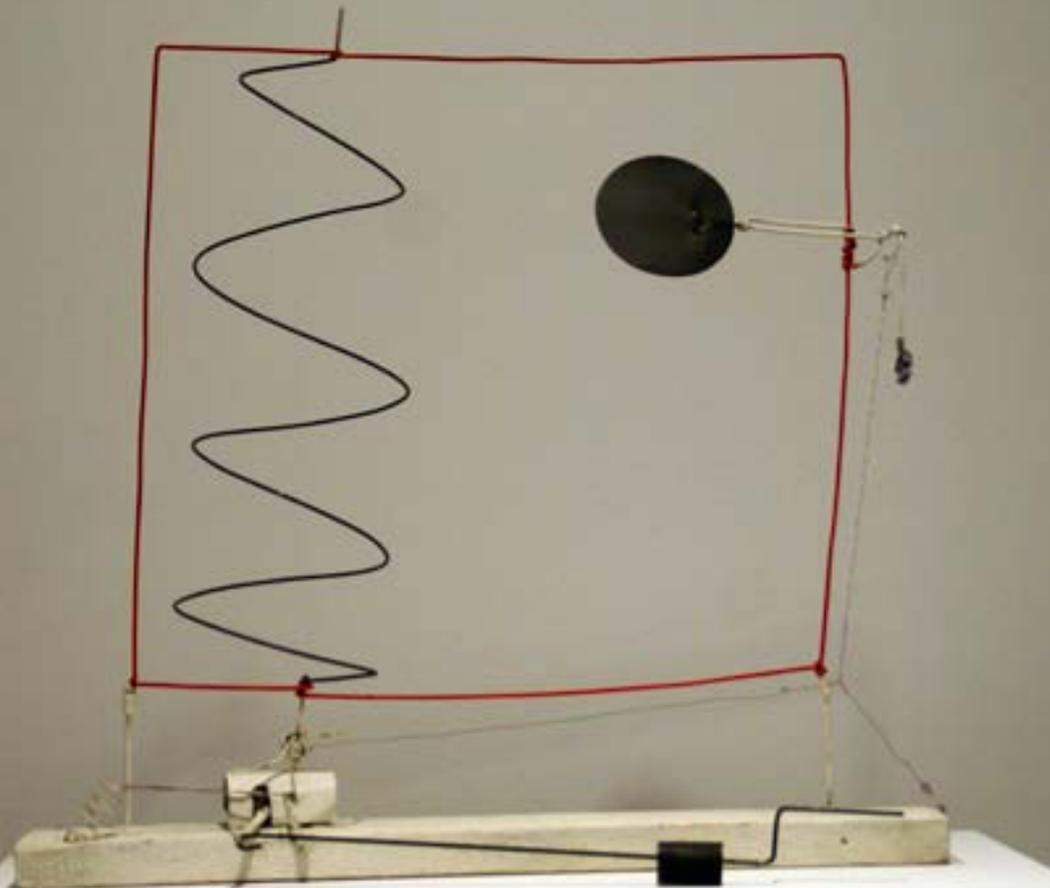

- Light-Space  
Modulator (1922-30)

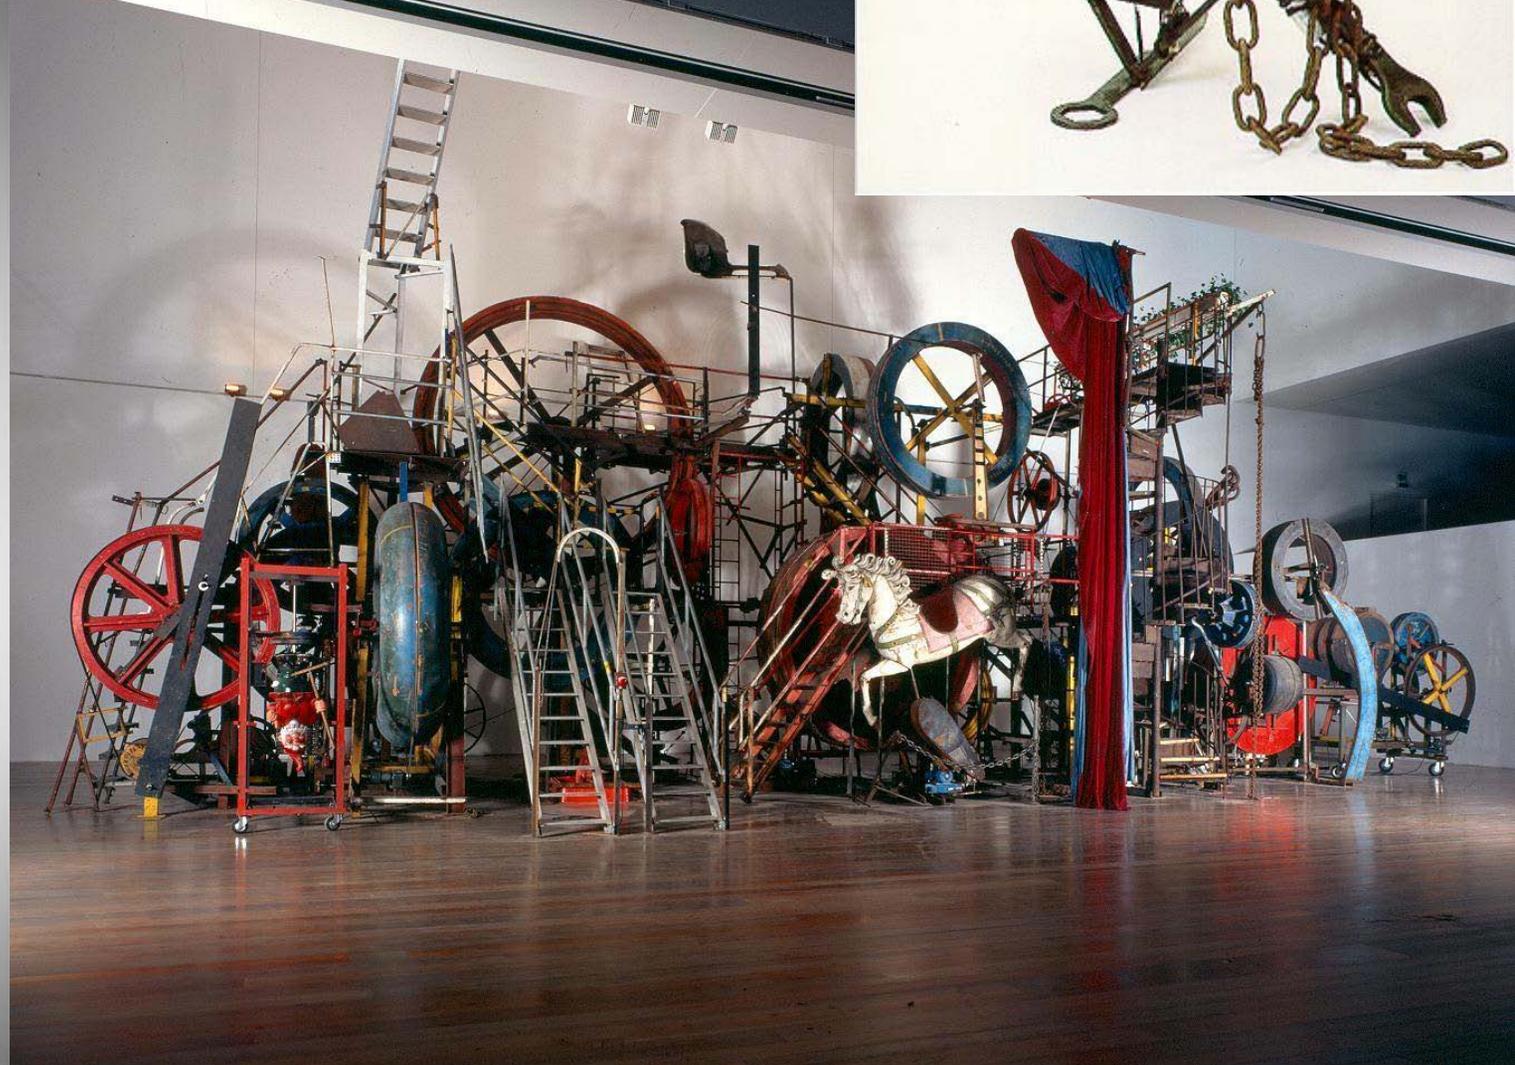

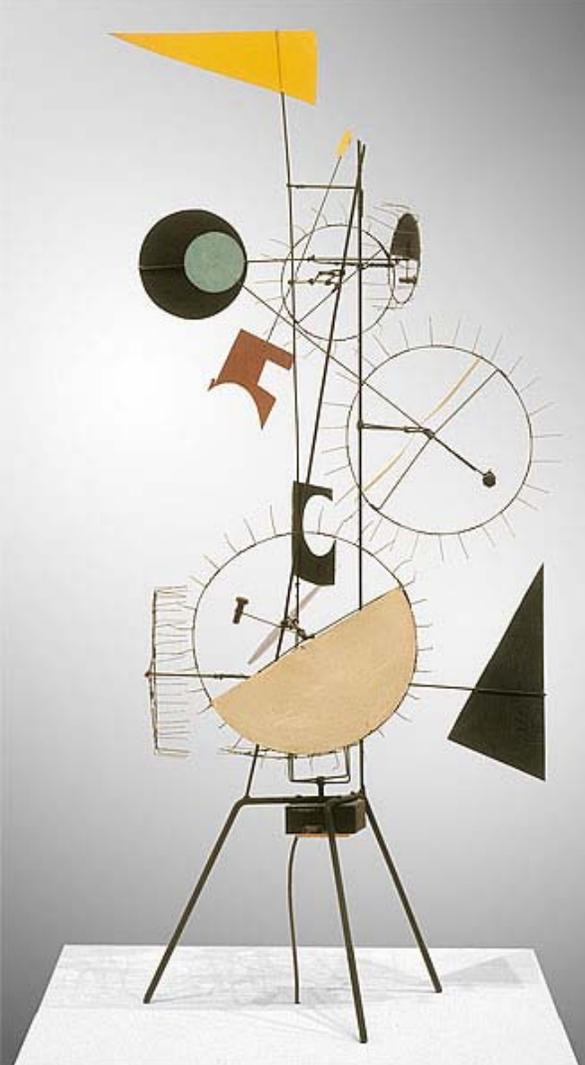

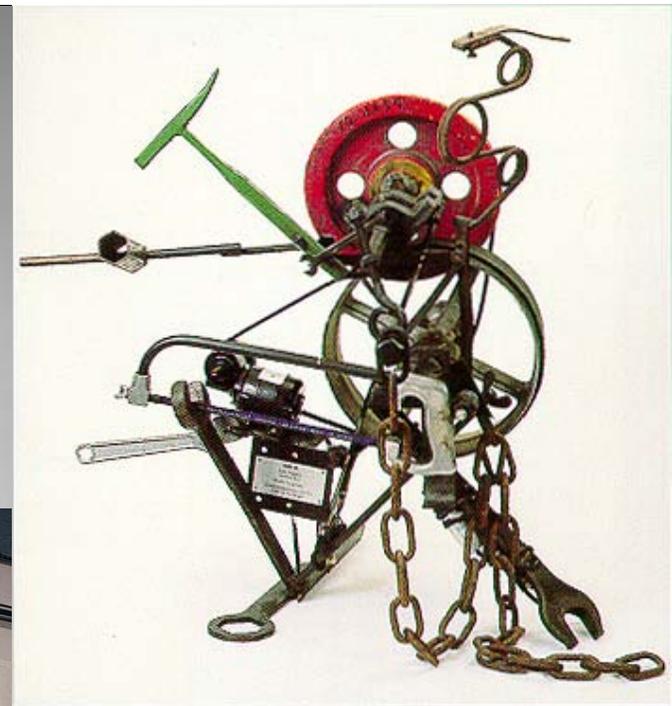

# Alexander Calder

(1898 – 1976)

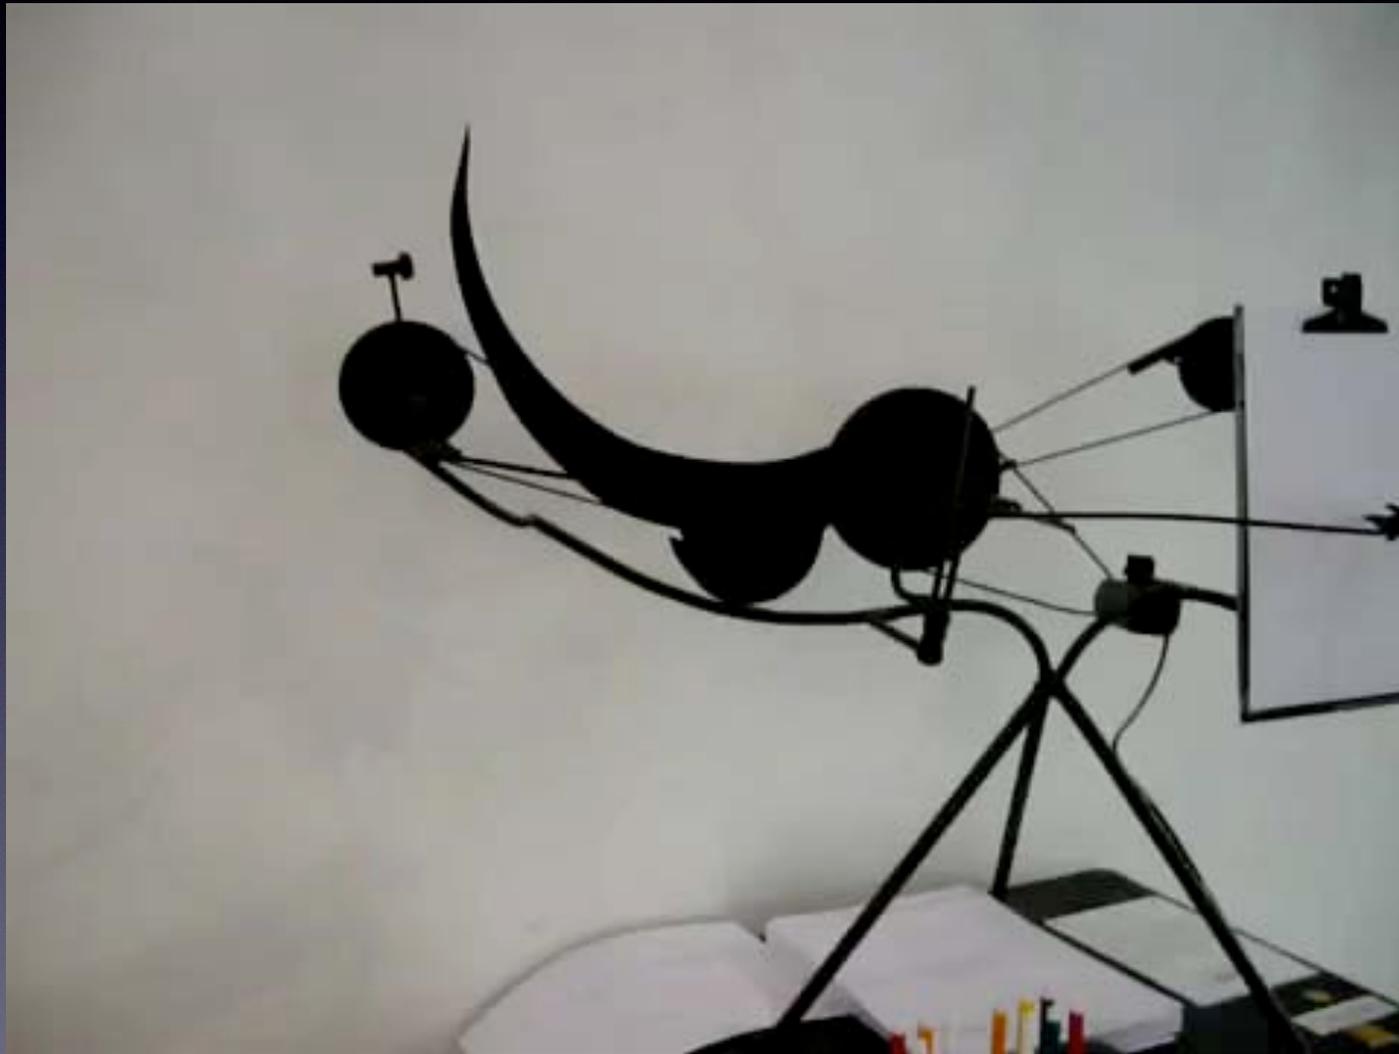

Mobiles and Stables  
Wire and Circuses

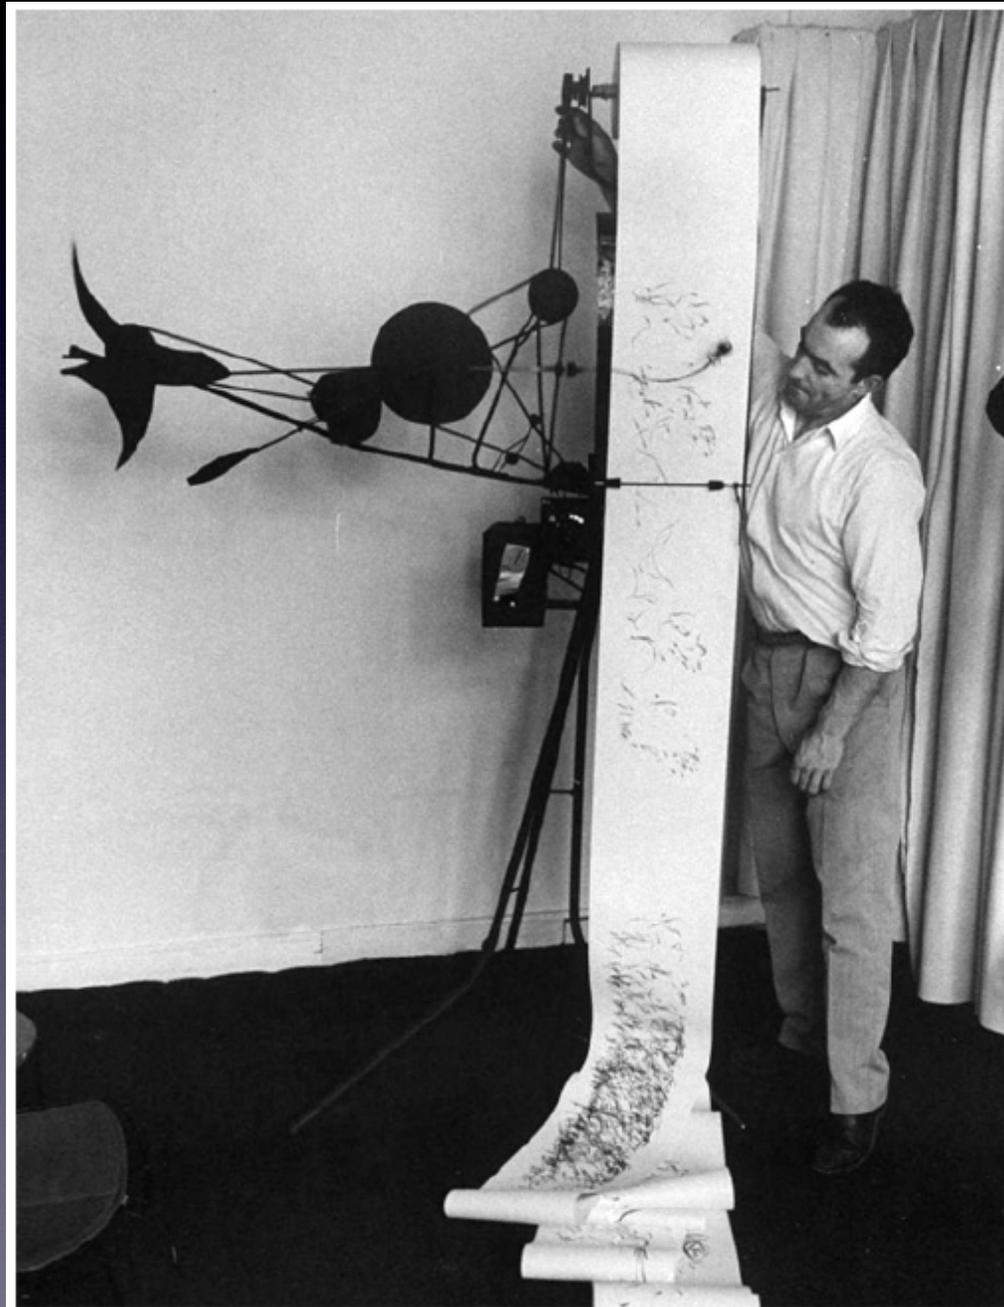

# Jean Tinguely

# Jean Tinguely (1925 – 1991)

# Jean Tinguely (1925 – 1991)

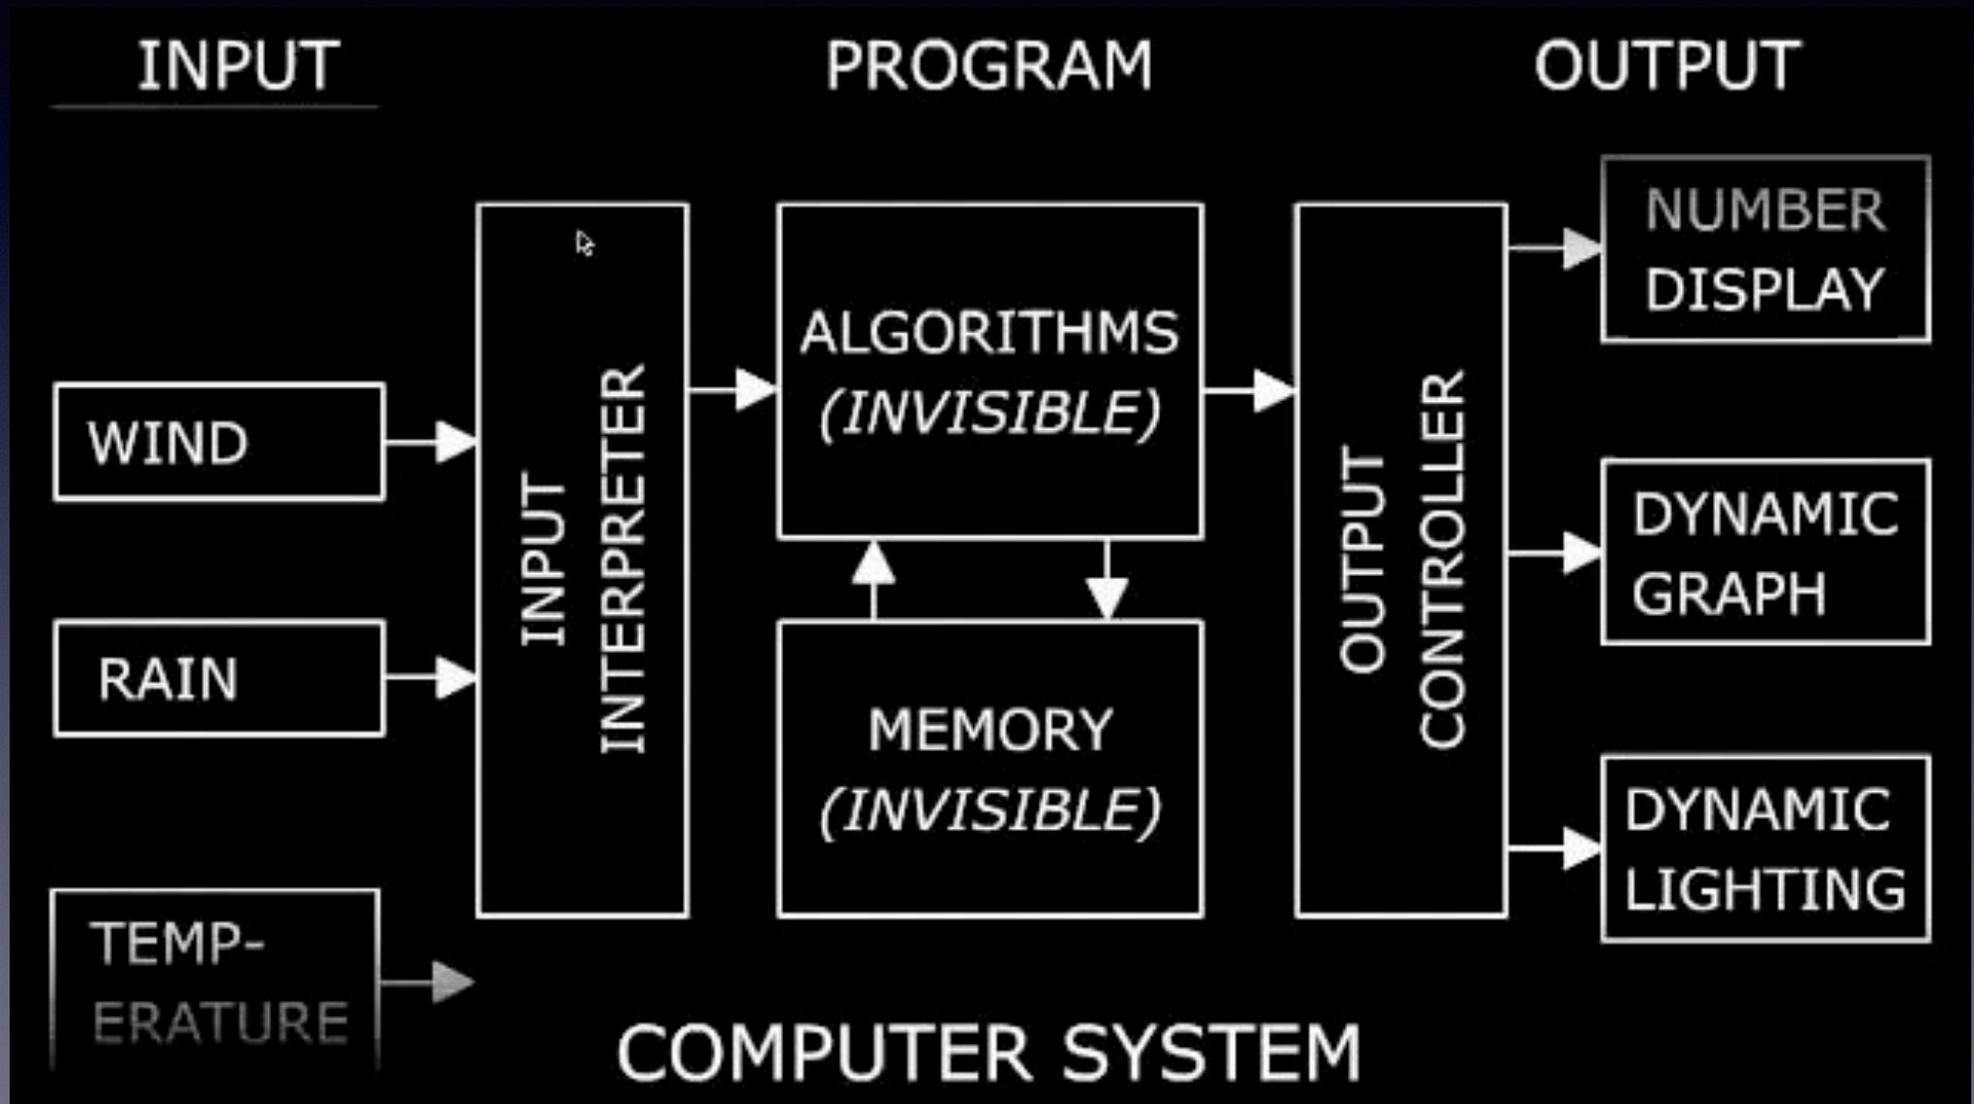

Metamatics

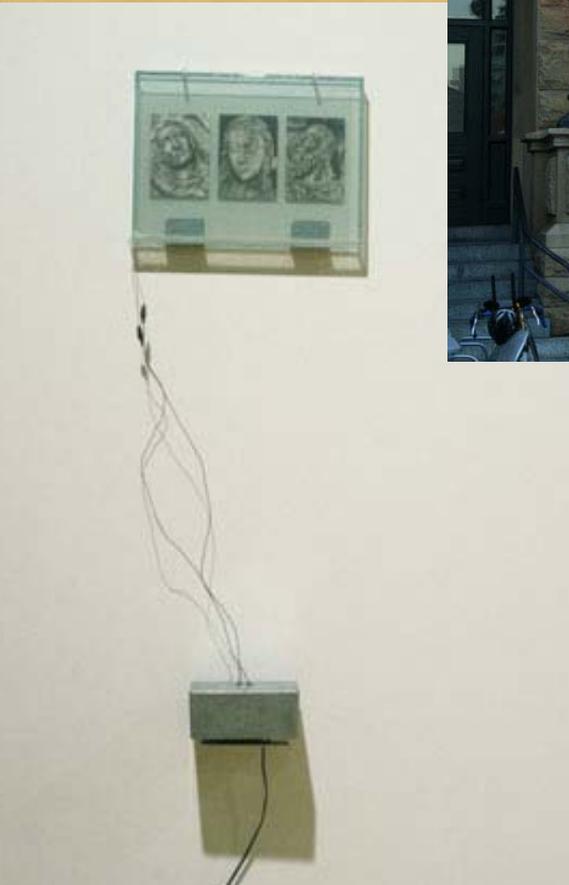

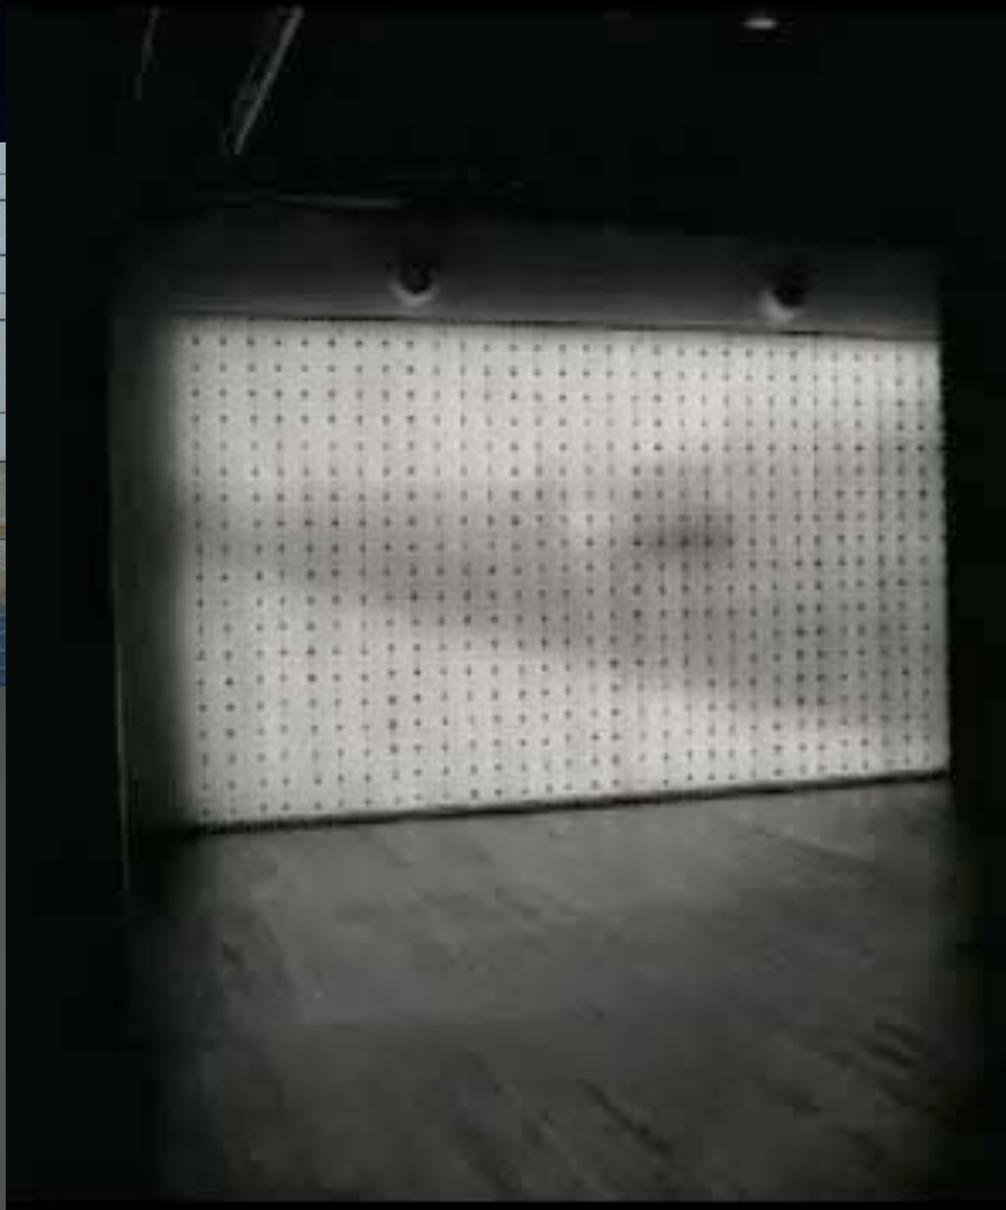

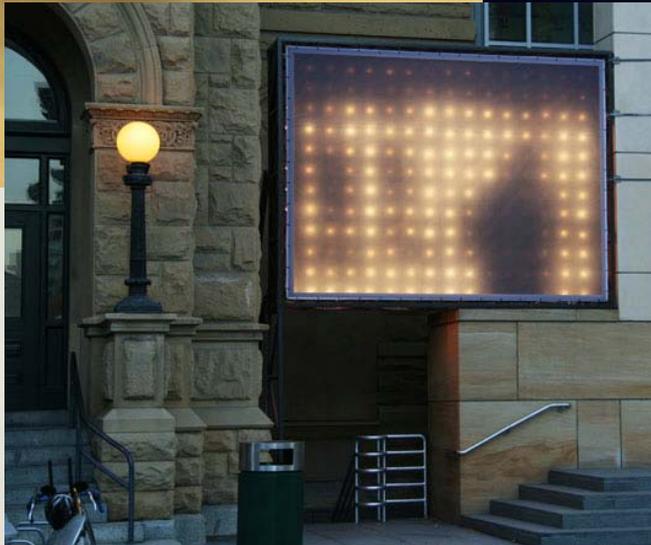

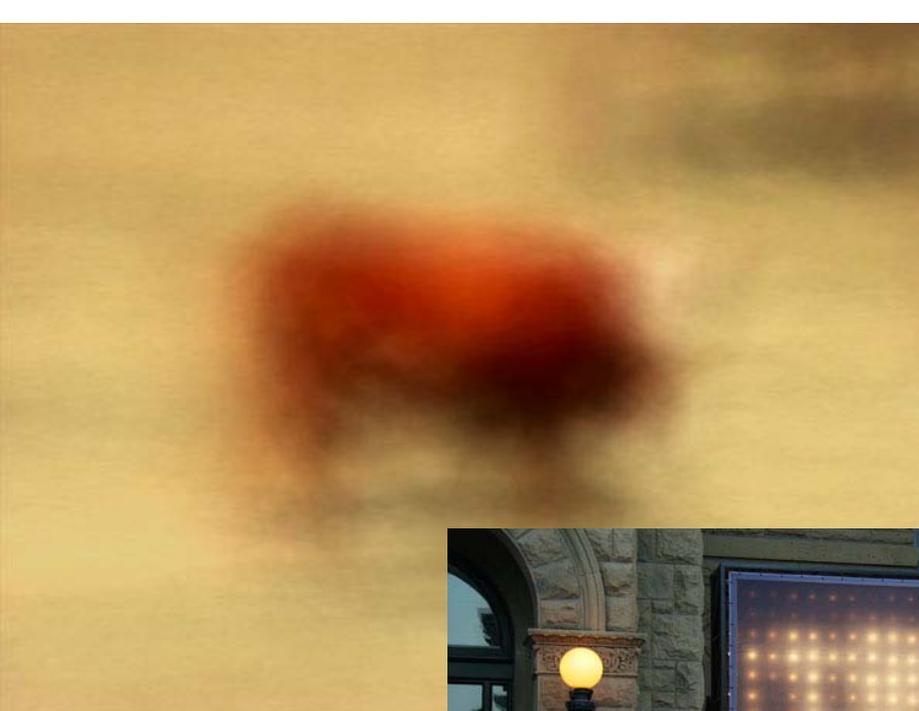

# Jump ahead to the Computer Age

- Electronic control
  - microprocessors or discrete electronics
- Mechanical actuators
  - motors, servos, relays, solenoids, etc.
  - speakers, buzzers, other noise makers
- Lights
  - LEDs, light bulbs, EL wire, etc.
- Sensors to interact with the viewer
  - distance, movement, sound, temperature, vibration, etc.

# Jim Campbell's Algorithm

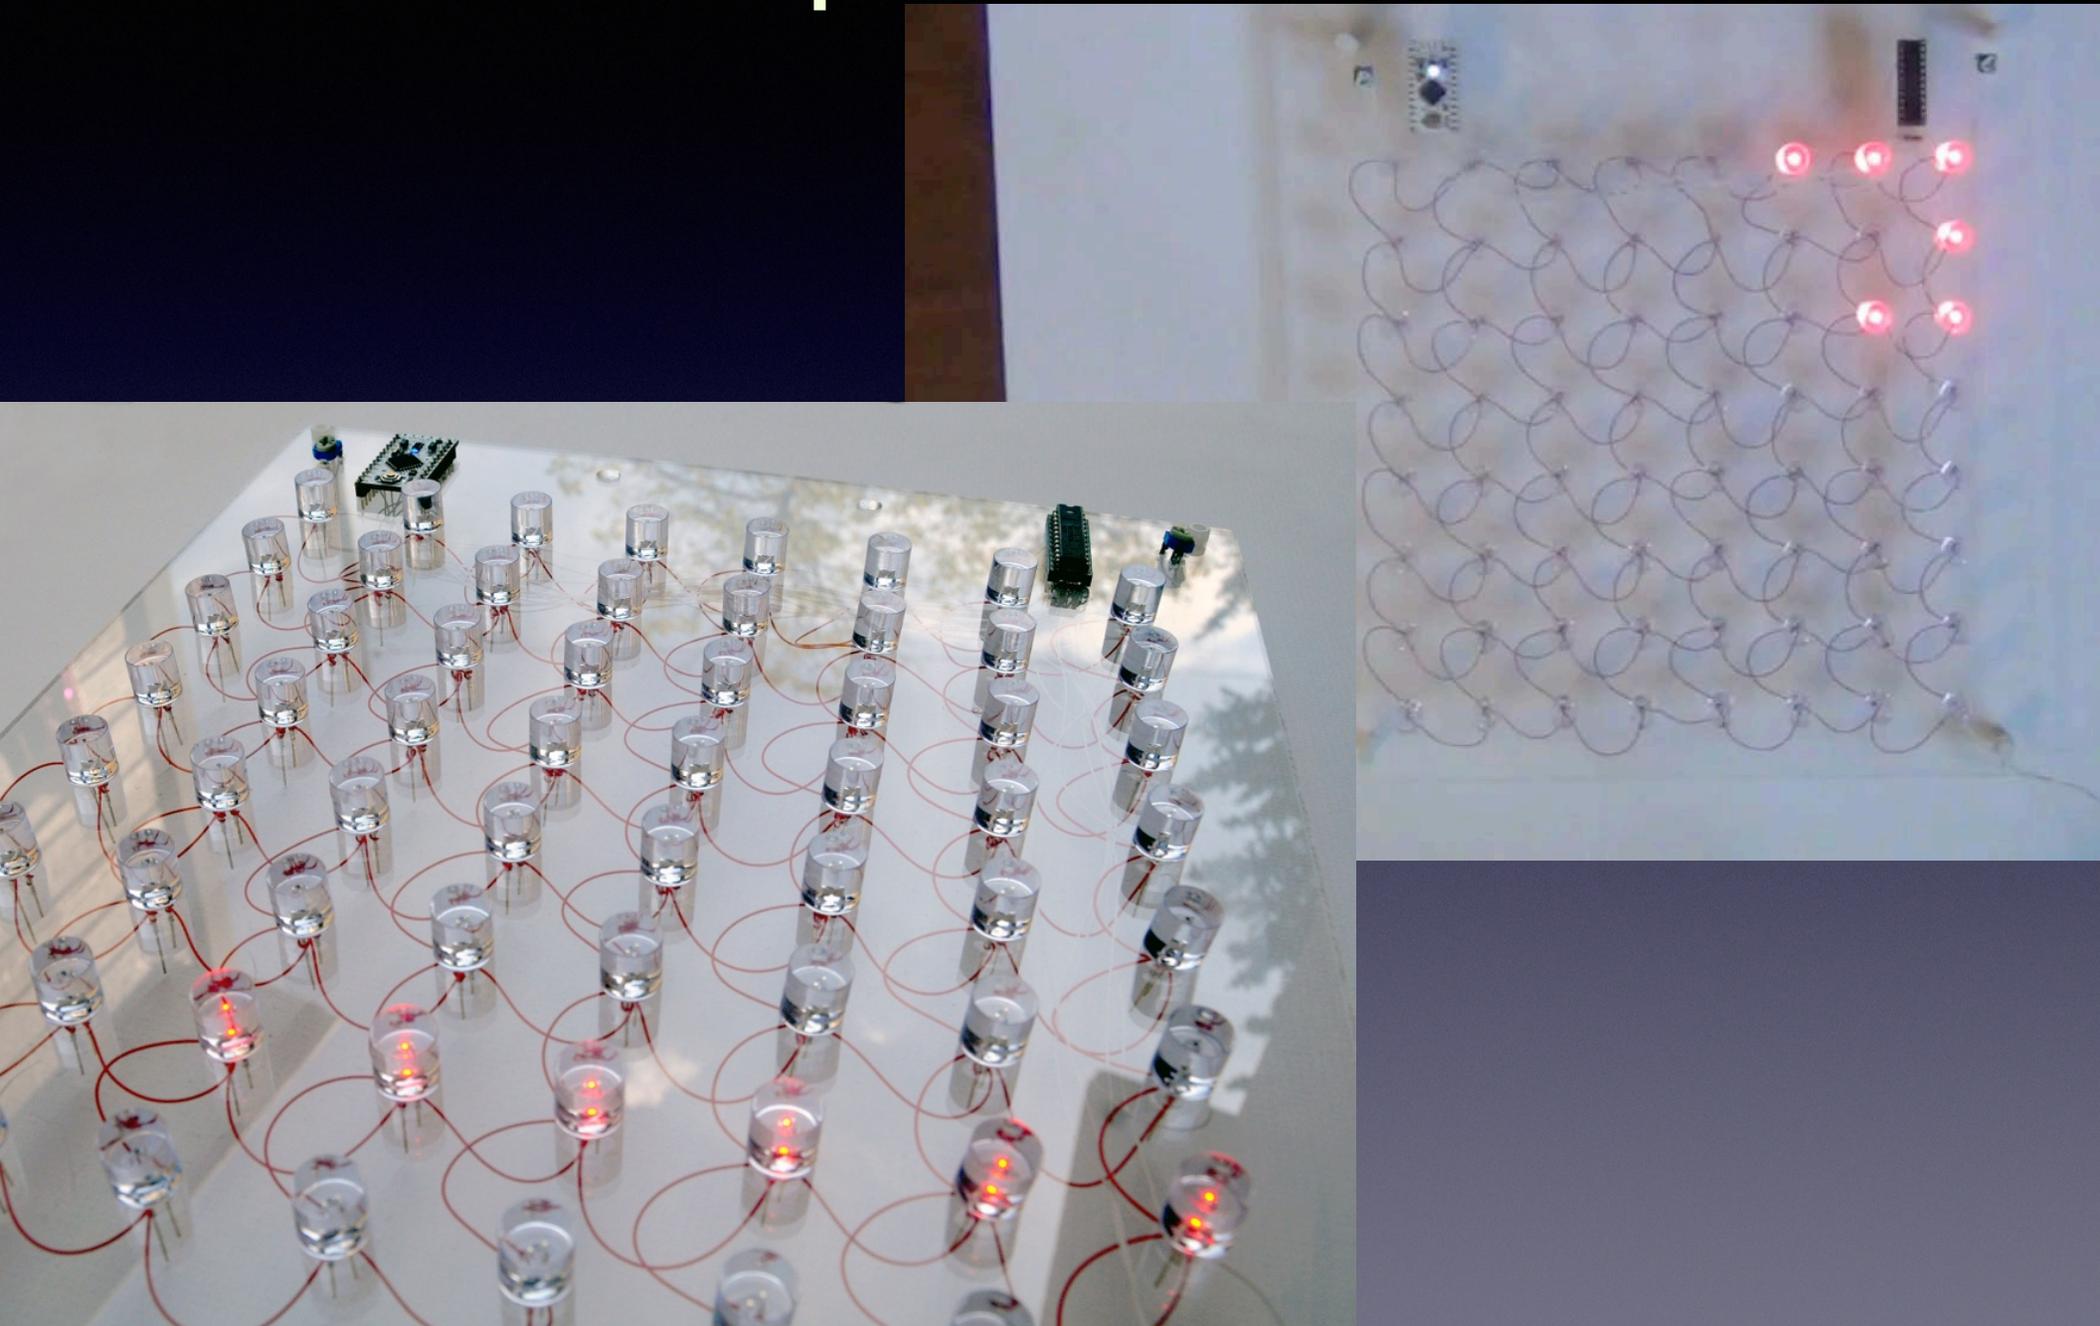

# Jim Campbell (1956 - )

# Jim Campbell

# Serpente Rosso

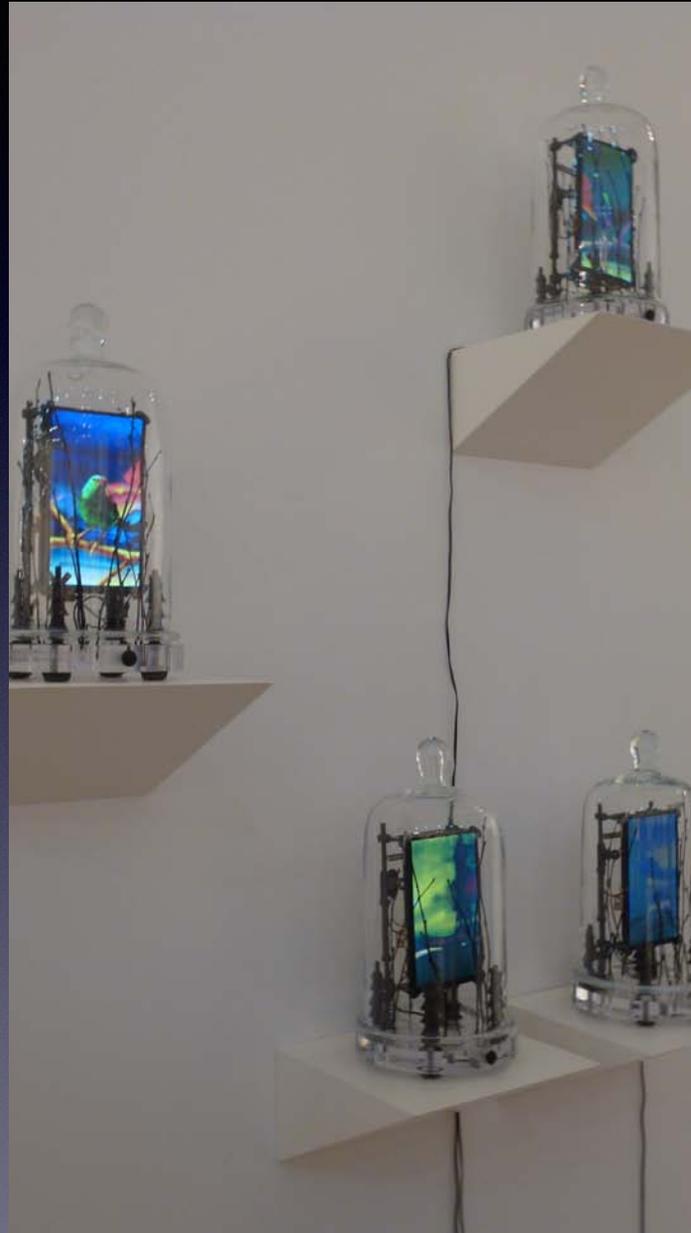

# Alan Rath (1959 - )

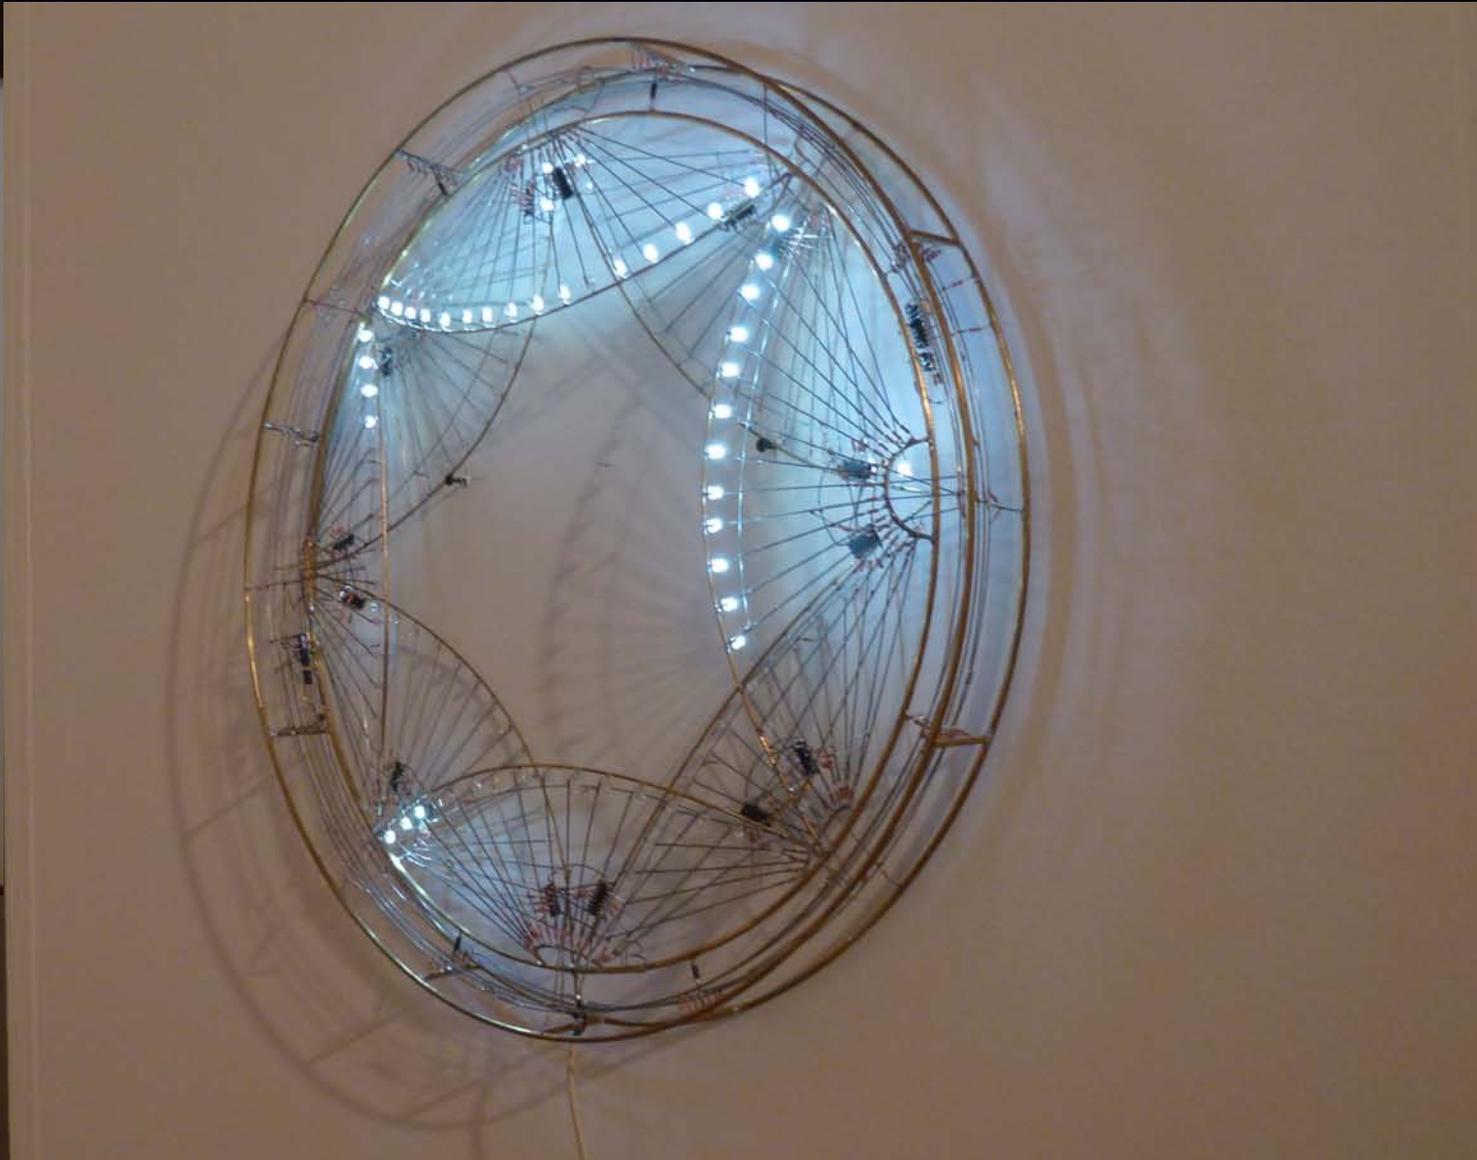

# Alan Rath (1959 - )

telepresent wind  
2009

# Rebecca Horn

# Hektor - painting device

# Patrick Tresset

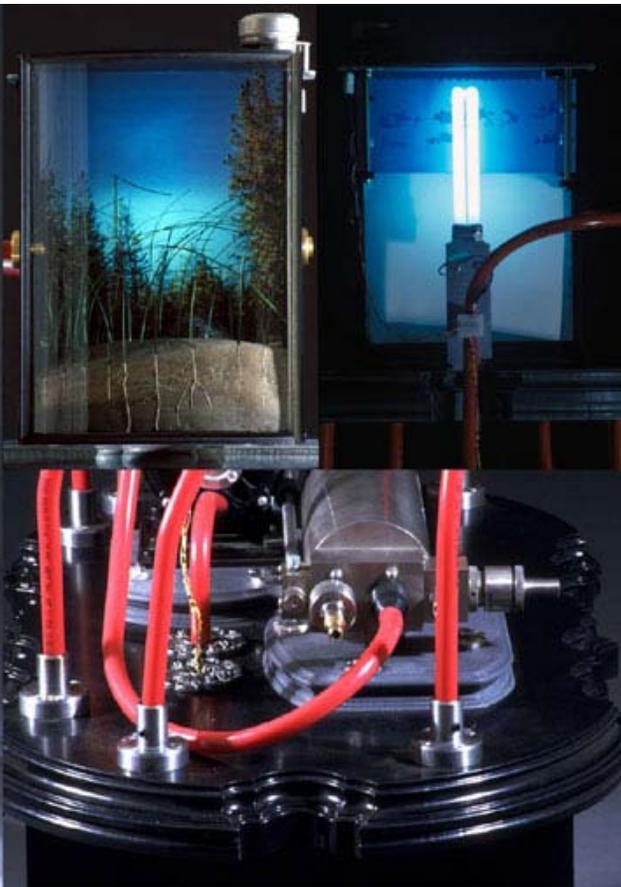

# Jim Pallas

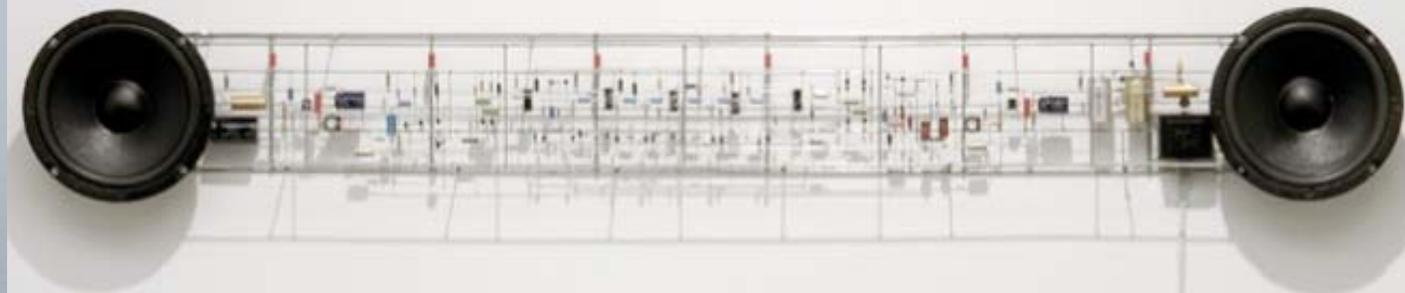

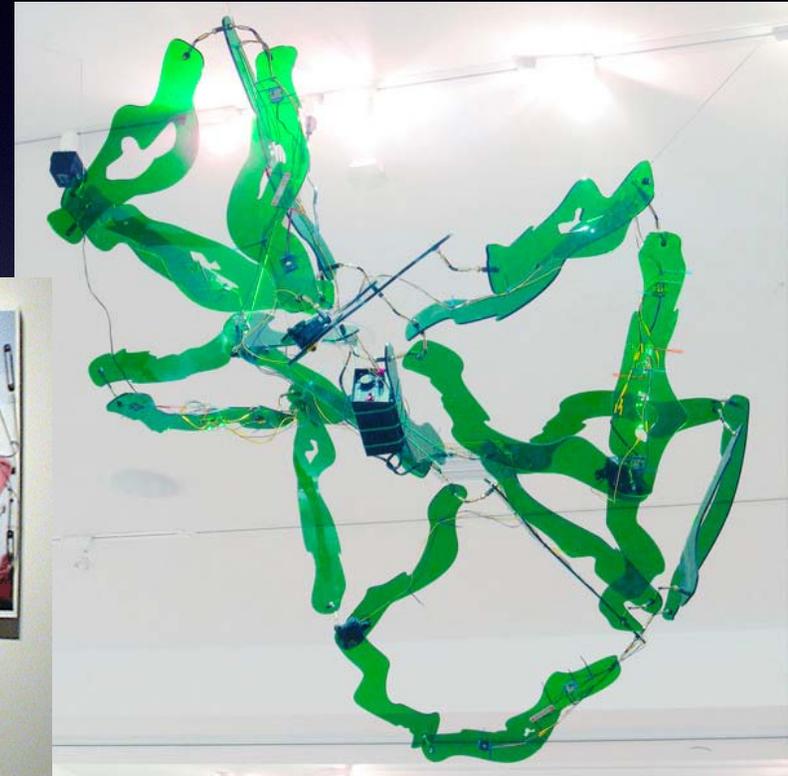

# Paul Stout

  
THE  
UNIVERSITY  
OF UTAH

# Lots of others...

Sabrina Raaf, Ann Hamilton,  
Meridith Pingree, Roxy Paine,  
Tim Hawkinson, Krzysztof Wodiczko, etc...

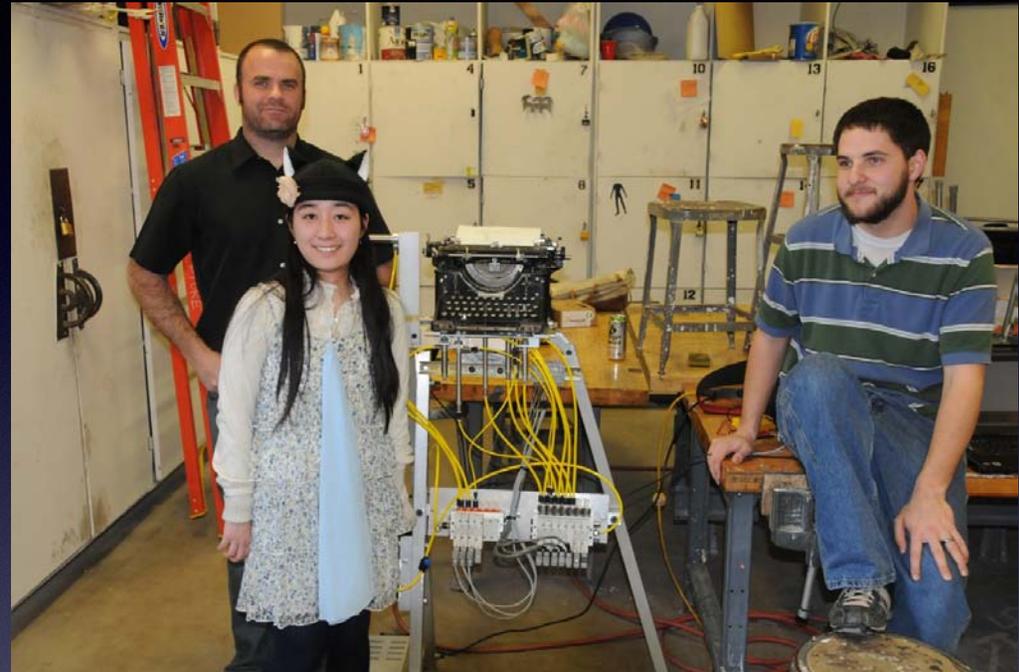

# Cross-Disciplinary Class

- Bring Art students and Computer Science and Engineering (CSE) students together
- Design and build embedded-system-controlled kinetic art
- Goal is benefit for both groups of students
- Fundamental nature of *Design*?
- Design thinking vs. computational thinking?

# Class Overview: CS5789

- Basic reactive programming with embedded systems
- Electronics fundamentals
- Sensors and actuators as I/O
- Basic 3d art concepts
  - Formal elements: aesthetics, proportion, balance, tension
  - Material studies and mechanical linkages
- Studio-based instruction model

# Class Overview

- Individual and group projects
  - Everybody tries everything individually
  - Also work in interdisciplinary teams
- Finish with a gallery show
  - 2009/2010: Invisible Logic
  - 2010/2011: Intersectio
  - Spring 2012: Drawing Machines
  - Spring 2014: Input/Artput
  - Spring 2015: C:\Art\Run

# Intersectio

# Examples of Student Projects

# Examples of Student Projects

# Examples of Student Projects

# Conclusions

- Embedded systems and kinetic art is a natural collaboration
  - Exploration of fundamental design concepts
  - Design-thinking is a natural complement to computational-thinking
- Studio instruction model is fascinating
  - Both groups of students benefit from working with each other
  - Cross-college collaboration – just the beginning!
