Implement **passed-exam?**, which determines whether a student passed an exam based on a record that is either the exam grade (70 and up is passing) or "empty" to indicate that the student has not yet taken an exam.

Implement **passed-exam?**, which determines whether a student passed an exam based on a record that is either the exam grade (70 and up is passing), *an original exam grade and re-take grade (passing if either is passing)*, or "empty" to indicate that the student has not yet taken an exam.

Implement `close-blinds?`, which takes an appointment (either empty or a combination of person and place) and determines whether office blinds need to be closed for Adam (pictured below), whose eyes are sensitive.
