

Defining Recursion

Last time:

```
{rec {<id>1 <FAE>1}  
      <FAE>2}
```

could be parsed the same as

```
{with {<id>1 {mk-rec {fun {<id>1} <FAE>1} }}}  
      <FAE>2}
```

which is really

```
 {{fun {<id>1} <FAE>2}  
 {mk-rec {fun {<id>1} <FAE>1} }}}
```

Defining Recursion

Another approach:

```
(local [(define fac
         (lambda (n)
           (if (zero? n)
               1
               (* n (fac (- n 1))))))]
        (fac 10))
```

⇒

```
(let ([fac 42])
  (set! fac
        (lambda (n)
          (if (zero? n)
              1
              (* n (fac (- n 1)))))))
  (fac 10))
```

Implementing Recursion

The **set!** approach to definition works only when the defined language includes **set!**.

But the **set!** approach to implementation requires only that the implementation language includes **set!**...

RCFAE Grammar

```
<RCFAE> ::= <num>
